Strakowski, 2024 What is commonly referred to in the U S as the mental health care system is not really a system at all While excellent programs exist in every state in every community across America the system is actually a set of fragmented services provided inequitably by a haphazard array of specialty providers often with inadequate resources and only tenuously connected to health care systems for other health needs Crisis is too often the first point of contact for people experiencing a mental illness while year over year increases in rates of anxiety depression traumatic stress and death from suicide and overdose have led many to characterize the current situation as a pandemic or epidemic of mental illness constituting a national emergency For youth and young adults in late 2021 this emergency was formally recognized by the U S Surgeon General in the first Advisory ever issued regarding the nation s mental health

**Advances in Health Informatics and Electronic Healthcare Applications: Global Adoption and Impact of Information Communication Technologies** Khoubati, Khalil,Dwivedi, Yogesh K.,Srivastava, Aradhana,Lal,

Banita,2009-07-31 This book presents a comprehensive resource elucidating the adoption and usage of health informatics Provided by publisher *Portals* Andrew Cox,2006 First applied to internet gateways such as Yahoo the concept of the

portal has evolved in a bewildering number of directions. Different themes of personalization, aggregation or integration seem to have dominated our understanding of what a portal should be at different times. Many organizations and institutions have borrowed the idea from the net to address local problems of integrating and presenting information sources to users yet they have developed the concept in different ways. Meanwhile new models seem to be constantly emerging from the internet. Tracking this evolving concept is clearly of particular concern for information services. How can they best take advantage of internet portals to improve access to resources? What are the requirements for delivery of diverse content through a local portal? And how do portals run by libraries relate to wider organizational initiatives? This edited collection seeks answers to these questions, providing the library and broader information community with an overview of how portals are currently being used. Leading edge researchers and practitioners explore the variety of ways in which the aspiration to portalize information is currently being realized and offer several views on likely future trends. The book is divided into five sections. Section 1 discusses generic aspects of portals such as questions of definition as well as exploring the underlying technologies and overarching management issues and the concepts of personalization and user needs analysis. Section 2 focuses on the role of information services in developing portals. Sections 3 and 4 analyse the current experience of portals within the corporate, public and academic sectors with case studies and reviews of sector trends. Section 5 offers various perspectives on the future development of the concept of the portal. Readership: This is an invaluable book for the growing numbers of information practitioners interested in developing or contributing to a portal and those supporting users of portals. It will also be useful to students of information management seeking to increase their understanding of how the concept of the portal is being realized in the information world.

**History of Computing: Learning from the Past** Arthur Tatnall,2010-08-13 History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn t history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010
