Trees Richard Preston, 2008-02-12 Hidden away in foggy uncharted rain forest valleys in Northern California are the largest and tallest organisms the world has ever sustained the coast redwood trees *Sequoia sempervirens* Ninety six percent of the ancient redwood forests have been destroyed by logging but the untouched fragments that remain are among the great wonders of nature The biggest redwoods have trunks up to thirty feet wide and can rise more than thirty five stories above the ground forming cathedral like structures in the air Until recently redwoods were thought to be virtually impossible to ascend and the canopy at the tops of these majestic trees was undiscovered In *The Wild Trees* Richard Preston unfolds the spellbinding story of Steve Sillett Marie Antoine and the tiny group of daring botanists and amateur naturalists that found a lost world above California a world that is dangerous hauntingly beautiful and unexplored The canopy voyagers are young just college students when they start their quest and they share a passion for these trees persevering in spite of sometimes crushing personal obstacles and failings They take big risks they ignore common wisdom such as the notion that there is nothing left to discover in North America and they even make love in hammocks stretched between branches three hundred feet in the air The deep redwood canopy is a vertical Eden filled with mosses lichens spotted salamanders hanging gardens of ferns and thickets of huckleberry bushes all growing out of massive trunk systems that have fused and formed flying buttresses sometimes carved into blackened chambers hollowed out by fire called fire caves Thick layers of soil sitting on limbs harbor animal and plant life that is unknown to science Humans move through the deep canopy suspended on ropes far out of sight of the ground knowing that the price of a small mistake can be a plunge to one's death Preston's account of this amazing world by turns terrifying moving and fascinating is an adventure story told in novelistic detail by a master of nonfiction narrative The author shares his protagonists passion for tall trees and he mastered the techniques of tall tree climbing to tell the story in *The Wild Trees* the story of the fate of the world's most splendid forests and of the imperiled biosphere itself

climbing solo hundreds of feet into the air in Australia's rainforests to measuring tree growth in the northeastern United States from searching the redwoods of the Pacific coast for new life to studying leaf eaters in Scotland's Highlands from conducting a BioBlitz in Malaysia to conservation planning in India and collaborating with priests to save Ethiopia's last forests Lowman launches us into the life and work of a field scientist ecologist and conservationist She offers hope specific plans and recommendations for action despite devastation across the world through trees we can still make an immediate and lasting impact against climate change A blend of memoir and fieldwork account *The Arbornaut* gives us the chance to live among scientists and travel the world even in a hot air balloon It is the engrossing uplifting story of a nerdy tree climber the only girl at the science fair who becomes a giant inspiration a groundbreaking ground defying field biologist and a hero for trees everywhere Includes black and white illustrations *Congressional Record* United States. The Ghost Forest Greg King,2023-06-06 The definitive story of the California redwoods their discovery and their exploitation as told by an activist who fought to protect their existence against those determined to cut them down Every year millions of tourists from around the world visit California's famous redwoods Yet few who strain their necks to glimpse the tops of the world's tallest trees understand how unlikely it is that these last isolated groves of giant trees still stand at all In this gripping historical memoir journalist and famed redwood activist Greg King examines how investors and a growing U S economy drove the timber industry to cut down all but 4 percent of the original two million acre redwood ecosystem King first examined redwood logging in the 1980s as an award winning reporter What he found in the woods convinced him to leap the line of neutrality and become an activist dedicated to saving the very last ancient redwood groves remaining in private hands The land grab began in 1849 when a green gold rush of migrants came to exploit the legendary redwoods that grew along the Russian River Several generations later in 1987 Greg King discovered and named Headwaters Forest at 3 000 acres the largest ancient redwood habitat remaining outside of parks and he led the movement to save this grove After a decade of one of the longest most dramatic and violent environmental campaigns in US history in 1999 the state and federal governments protected Headwaters Forest The Ghost Forest explores a central question an overhanging mystery What was it

like this botanical Elysium that grew only along the Northern California coast a forest so spectacular but also uniquely valuable as a cornerstone of American economic growth that in the end it would inspire life and death struggles Few but loggers and surveyors ever saw such magnificent trees ancient sentinels that like ghosts have informed King s understanding of the world On a lifelong journey King finds himself through the generations and through the trees A Next Big Idea Club Must Read Title Churchill in North America, 1929 Bradley P.
