## **Reef Fishes Of Hong Kong:**

*Reef Fishes of Hong Kong* Yvonne Sadovy, Andrew S. Cornish, 2000-01-01 This book documents the first comprehensive survey of reef fishes ever undertaken in Hong Kong It includes descriptions and colour photographs of over 320 fish species a third of which have never before been recorded here

**The Marine Flora and Fauna of Hong Kong and Southern China V** Brian Morton, 2000-12-01 From 6 25 April 1998 the Tenth International Workshop on the Marine Flora and Fauna of Hong Kong and South China was convened at the Swire Institute of Marine Science of the University of Hong Kong Thirteen scientists from six countries and twenty two scientists and students from Hong Kong investigated aspects of the marine flora and fauna of the Cape d Aguilar Marine Reserve and the southeastern waters of Hong Kong This was to obtain more information about the newly established reserve the only one in Hong Kong and the changes that had taken place on the seabed in the southern waters since they were dredged between 1992 1995 respectively and in the latter case to see if there had been any subsequent benthic recovery The Proceedings of the workshop contains thirty six original research papers dealing with aspects of the taxonomy and anatomy behaviour and physiology of marine life in Hong Kong and Southern China Papers also explore aspects of Hong Kong s marine parks and reserves including the pollution of Hong Kong s marine life with particular reference to the Cape d Aguilar Marine Reserve established only in 1996 and the fauna of its territorial southern waters The Workshop was sponsored by the University of Hong Kong the Croucher Foundation and the K C Wong Foundation so as to bring eminent overseas scientists to Hong Kong to work with their local colleagues and students The success of the workshop concept is self evident in the contents and scope of these proceedings This was the eighth workshop convened in Hong Kong since 1977 and these proceedings have become the single most important body of information on the long term changes that have taken place in its marine environment over an extended time frame The volumes are also the largest regional repository of information on the marine life of the territorial waters of Hong Kong and the northern rim of the South China Sea For those with any interest in Hong Kong s marine environment therefore this proceedings and its predecessors are essential reading

**The Sea Shore Ecology of Hong Kong** Brian Morton, John Morton, 1983-04-01 Hong Kong is strategically located between the temperate Japonic and the great tropical Indo West Pacific zoogeographic provinces Influenced by the currents of the South China Sea and the huge outflow of fresh water from the Pearl River Hong Kong s marine flora and fauna are extremely diverse Temperate species may appear if only briefly during the cooler winter months Conversely air and water temperatures remain high enough for a strong tropical component Hong Kong is comparatively rich in mangrove stands and reef corals are well developed subtidally There is a strong north west to south east salinity gradient further enhancing diversity Geologically the Hong Kong shore is a drowned coastline deeply incised and with former mountain peaks represented by numerous off shore islands This book reviews the factors creating and maintaining Hong Kong s living shore

and describes the wide range of plants and animals found within the intertidal boundaries of the shore. A full range from exposure to shelter is to be found from communities of the sheer rock faces beaten by the storm waves of the South China Sea to the denizens of mudflats in high shelter at the heads of harbours and inlets. For the first time the occupants of these various shores are illustrated and described both as individual species and as components of a rich mosaic of life. The factors of pollution and development that are destroying the diversity of the rich complex of shores are described. Frogfishes Theodore W. Pietsch, Rachel J. Arnold, 2020-03-03. The authoritative expert's guide to fascinating frogfishes and their unusual lives. Winner of the PROSE Award for Best Single Volume Reference in Science by the Association of American Publishers. Unique among the world's fishes, frogfishes display a bizarre combination of attributes and behaviors that make them a subject of fervent study. Through cunning and trickery they turn would-be predators into prey; they walk across the ocean floor and jet-propel through open water; some lay their eggs in a floating mucoid mass while others employ complex patterns of parental care, and they are certainly among the most colorful of nature's productions. In *Frogfishes*, two of the world's leading anglerfish experts, Theodore W. Pietsch and Rachel J. Arnold, bring together an enormous amount of information about these incredible creatures. The only detailed exploration of frogfishes in print, the book touches on everything from their morphology and biomechanics to their diets and habitats. Enhanced with more than 500 spectacular color images, the book also includes a thorough look at about 5,000 preserved specimens, an annotated synonymy for all extant taxa, as well as keys and tables to facilitate identification, insights into frogfish feeding, locomotion, mimicry, and reproductive behavior, descriptions of recent scientific advances including the discovery of new species, shifts in geographic distribution, and emerging DNA sequencing techniques, and tips for frogfish seeking divers and aquarists that emphasize conservation. Unmasking the mysteries of frogfish evolution and phylogenetic relationships through close examination of their fossil record, morphology, and molecular reconstruction, *Frogfishes* demonstrates the surprising diversity and beauty of this remarkable assemblage of marine shorefishes. **Ecology of Fishes on Coral Reefs** Camilo Mora, 2015-04-23. The local diversity and global richness of coral reef fishes, along with the diversity manifested in their morphology, behaviour, and ecology, provides fascinating and diverse opportunities for study. Reflecting the very latest research in a broad and ever-growing field, this comprehensive guide is a must-read for anyone interested in the ecology of fishes on coral reefs. Featuring contributions from leaders in the field, the 36 chapters cover the full spectrum of current research. They are presented in five parts, considering coral reef fishes in the context of ecology, patterns and processes, human intervention and impacts, conservation, and past and current debates. Beautifully illustrated in full colour, this book is designed to summarise and help build upon current knowledge and to facilitate further research. It is an ideal resource for those new to the field as well as for experienced researchers.

*Groupers of the World* Matthew T. Craig, Yvonne J. Sadovy de Mitcheson, Phillip C. Heemstra, 2024-07-31. This is the sixteenth issue in the FAO series of worldwide annotated and illustrated catalogues of major groups of organisms that enter

marine fisheries It contains the 159 species in 15 genera known from the serranid subfamily Epinephelinae including one species new to science There is an introductory section with general remarks on habitat and fisheries of the family a glossary of technical terms an illustrated key to each genus and all species and a detailed account for all species Species accounts include an illustration of each species scientific and vernacular names and information on habitat biology fisheries size relevant literature and distribution

**Baseline Studies of Biodiversity** Daniel Pauly,Purwito Martosubroto,1996 **Our Dying Planet** Peter Sale,2011-08-02 Weaving into the narrative his own firsthand field experiences around the world the author an ecologist brings ecology alive while giving a solid understanding of the science at work behind today s pressing environmental issues He delves into topics including deforestation biodiversity loss over fishing population growth use of fossil fuel and climate change while discussing the real consequences of out growing ecological footprint Coral reefs are on track to become the first ecosystem actually eliminated from the planet So says the author in this crash course on the state of the planet He draws from his own extensive work on coral reefs and from recent research by other ecologists to explore the many ways we are changing the Earth and to explain why it matters Most important this book emphasizes that a gloom and doom scenario is not inevitable and as the author explores alternative paths he considers the ways in which science can help us realize a better future The Marine Flora and Fauna of Hong Kong and Southern China IV Brian Morton,1997-07-01 Following a three year cycle an International Workshop on the Marine Flora and Fauna of Hong Kong and Southern China was convened at the Swire Institute of Marine Science of the University of Hong Kong from 2 20 April 1995 Sixteen scientists from six

countries and fifteen scientists and students from Hong Kong investigated aspects of the marine flora and fauna of the Cape d Aguilar proposed marine reserve and the southeastern waters of Hong Kong The marine flora and fauna of this area of Hong Kong is poorly known and like others locally is threatened by pollution Such broad based studies of this area of Hong Kong s waters are needed urgently The Proceedings of the workshop contain thirty one original research papers dealing with aspects of the taxonomy and ecology of Hong Kong s marine life with particular reference to the Cape d Aguilar Marine Reserve and the benthic fauna of its territorial waters The workshop was sponsored by the University of Hong Kong to bring scientists and students together to study the shores and seas around its infant institute of marine science The success of the workshop is self evident in the contents and scope of these proceedings This venture like the first workshop convened in 1977 on the shores of the now disastrously polluted Tolo Harbour is a landmark publication It is a significant compilation of wide ranging research papers on an area of Hong Kong that has been hitherto little studied but which will one day be of vital conservation interest to local people if any of the territory s now threatened marine life is to survive

**Fish Physiology: The Physiology of Tropical Fishes** Adalberto Luis Val, Vera Maria Fonseca de Almeida e Val, David J. Randall, 2005-08-18 The Physiology of Tropical Fishes is the 21st volume of the well known Fish Physiology series and consists of 12 chapters The purpose of the book is to consolidate and integrate what is known about tropical fishes marine and freshwater species The twelve chapters focus on the physiological adaptations acquired during the evolutionary process to cope with warm and shallow hypoxic waters from tropical and neotropical hydrographic basins as well as with the intertidal and coral reef habitats which occur in abundance in tropical seas The special characteristics of tropical fish fauna will be issued in order to explain the tropical fish radiation which gave rise to such extreme fish diversity This present volume is a voyage through the tropical region reviewing the fish diversity of the main tropical freshwater sheds including the major tropical rivers and lakes the major dams and marine environments State of the art information on tropical fish physiology Written by specialists working in the Tropics Offers a diverse depiction of the various tropical fishes and the environment where they inhabit 12 innovative chapters covering a concise view of growth rate biological rhythms feeding plasticity cardio respiratory design and function diversity of structure and much more
