Rhine An Eco Biography 18152000:

The Rhine Mark Cioc, 2009-11-17 The Rhine River is Europe's most important commercial waterway channeling the flow of trade among Switzerland, France, Germany, and the Netherlands. In this innovative study, Mark Cioc focuses on the river from the moment when the Congress of Vienna established a multinational commission charged with making the river more efficient for purposes of trade and commerce in 1815. He examines the engineering and administrative decisions of the next century and a half that resulted in rapid industrial growth as well as profound environmental degradation and highlights the partially successful restoration efforts undertaken from the 1970s to the present. The Rhine is a classic example of a multipurpose river used simultaneously for transportation for industry and agriculture for urban drinking and sanitation needs for hydroelectric production and for recreation. It thus invites comparison with similarly overburdened rivers such as the Mississippi, Hudson, Colorado, and Columbia. The Rhine's environmental problems are however even greater than those of other rivers because it is so densely populated: 50 million people live along its borders; so highly industrialized: 10% of global chemical production; and so short: 775 miles in length. Two centuries of nonstop hydraulic tinkering have resulted in a Rhine with a sleek and slender profile. In their quest for a perfect canal-like river, engineers have modified it more than any other large river in the world. As a consequence, between 1815 and 1975, the river lost most of its natural floodplain, riverside vegetation, migratory fish, and biodiversity. Recent efforts to restore that biodiversity, though heartening, can have only limited success because so many of the structural changes to the river are irreversible. *The Rhine: An Eco Biography 1815-2000* makes clear just how central the river has been to all aspects of European political, economic, and environmental life for the past two hundred years.

Coordinated Eco-environmental Governance in Yangtze River Economic Belt—Based on the Practice of Tributary Jialing River Basin Luo Zhigao, Yang Jirui, 2024-12-30 The Yangtze River is the mother river of Chinese civilization, and the Yangtze River Economic Belt became China's national strategy in 2013, emphasizing ecological priority and green sustainable development. Ever since the research on the green transformation and development of the Yangtze River Economic Belt has boomed at home and abroad, yet there was little systematic research on the green development of the tributaries of the Yangtze River. As the largest tributary of the upper reaches of the Yangtze River, the Jialing River's eco-environmental governance is crucial for the construction of the Yangtze River Economic Belt as a pioneer demonstration belt of China's ecological civilization. So this book introduces the discourses of state leaders on eco-environmental construction, reviews the existing mechanisms of coordinated eco-environmental governance in river basins in China, and summarizes the achievements of coordinated eco-environmental governance in the Yangtze River Economic Belt. Then it studies the Jialing River Basin's coordinated eco-environmental governance measures, ecological industrialization, industrial ecologization, development environment, economy-society coupling, development ecological pressure, and etc. Additionally, this book compares the coordinated eco-environmental governance of the Wujiang River Basin, another tributary of the Yangtze River.

and the Thames Basin in the UK On this basis a networked eco environmental governance mode and implementation path in the Jialing River Basin are proposed

At Nature's Edge Gunnel Cederlöf, Mahesh Rangarajan, 2018-09-18 In an epoch when environmental issues make the headlines this is a work that goes beyond the everyday Ecologies as diverse as the Himalayas and the Indian Ocean coast the Negev desert and the former military bases of Vietnam or the Namib desert and the east African savannah all have in common a long time human presence and the many ways people have modified nature With research covering countries from Asia Africa and Australia the authors come together to ask how and why human impacts on nature have grown in scale and pace from a long pre history The chapters in this volume illumine specific patterns and responses across time going beyond an overt centring of the European experience The tapestry of life and the human reshaping of environments evoke both concern and hope making it vital to understand when why and how we came to this particular turn in the road Eschewing easy labels and questioning eurocentrism in today s climate vocabulary this is a volume that will stimulate rethinking among scholars and citizens alike

Flowing Progress Stefan Dorondel, Luminita Gatejel, 2025-08-15 Flowing Progress Transforming the Danube Through Infrastructure focuses on how different political regimes and forms of governance have imagined and technologically transformed the most international river in the world Multidisciplinary and drawing on methodologies of history anthropology of infrastructure and science technology and society this collection explores the tensions between the river and its natural pulses the humans that populate its floodplains state agencies and infrastructure The book engages the concept of disturbance to point out the circular and spiraling dynamics between hydrological processes and technopolitical and economic practices Disturbance denotes a specific type of long term dynamic between human attempts to control the Danube the material systems they implemented to achieve these goals and the agency of the river that both enabled the functioning of infrastructure and the breakdown of such arrangements It draws particular attention to the concerted efforts to contain and optimize the Danube s flow adding layer after layer of dams

Life Writing in the Posthuman Anthropocene Ina Batzke, Lea Espinoza Garrido, Linda M. Hess, 2022-01-01 Life Writing in the Posthuman Anthropocene is a timely collection of insightful contributions that negotiate how the genre of life writing traditionally tied to the human perspective and thus anthropocentric qua definition can provide adequate perspectives for an age of ecological disasters and global climate change The volume's eight chapters illustrate the aptness of life writing and life writing studies to critically reevaluate the role of the human vis vis non human others while remaining mindful of persisting inequalities between humans regarding who causes and who suffers damage in the Anthropocene age The authors in this collection not only expand the toolbox of life writing studies by engaging with critical insights from the fields of posthumanism and ecocriticism but in turn also enrich those fields by offering unique approaches to contemplate the responsibility of humans for as well as their relational existence in the posthuman Anthropocene

Spatializing the History of Ecology Raf de Bont, Jens Lachmund, 2017-06-26 This book advances a spatial perspective on the history of ecology Intrigued by broader debates in the humanities on the spatial turn the authors contribute to a more explicit and systematic development of spatial thinking in the history of ecology exploring to which extent a spatial perspective can shed new light on the history of ecological science and using ecology as a critical site to gain broader insights into the history of the environment in the nineteenth and twentieth centuries

Greening Europe Anna-Katharina Wöbse, Patrick Kupper, 2021-12-20 Today the environment seems omnipresent in European policy within and beyond the European Union The idea of a shared European environment however has come a long way and is still being contested Greening Europe focuses on the many ways people have interacted with nature and made it an issue of European concern The authors ask how notions of Europe mattered in these activities and they expose the many entanglements of activists across the subcontinent who set out to connect and network and to exchange knowledge worldviews and strategies that exceeded their national horizons Moving beyond human agency the handbook also highlights the eminent role nature played in both greening Europe and making Europe a shared environment

Natural Disasters, Cultural Responses Christof Mauch, Christian Pfister, 2009-03-16 Catastrophes it seems are becoming more frequent in the twenty first century According to UN statistics every year approximately two hundred million people are directly affected by natural disasters seven times the number of people who are affected by war Discussions about global warming and fatal disasters such as Katrina and the Tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities Hollywood has also produced numerous disaster movies in recent years some of which have become blockbusters This volume demonstrates that natural catastrophes earthquakes hurricanes floods etc have exercised a vast impact on humans throughout history and in almost every part of the world It argues that human attitudes

toward catastrophes have changed over time Surprisingly this has not necessarily led to a reduction of exposure or risk The organization of the book resembles a journey around the globe—from Europe to North Africa the Middle East and Asia and from the Pacific through South America and Mexico to the United States While natural disasters appear everywhere on the globe different cultures societies and nations have adopted specific styles for coping with disaster Indeed how humans deal with catastrophes depends largely on social and cultural patterns values religious belief systems political institutions and economic structures The roles that catastrophes play in society and the meanings they are given vary from one region to the next they differ—and this is one of the principal arguments of this book—from one cultural political and geographic space to the next The essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural social and technological strategies for doing so

Urban Rivers Stephane Castonguay, Matthew Evenden, 2012-05-10 Urban Rivers examines urban interventions on rivers through politics economics sanitation systems technology and societies how rivers affected urbanization spatially in infrastructure territorial disputes and in flood plains and via their changing ecologies Providing case studies from Vienna to Manitoba the chapters assemble geographers and historians in a comparative survey of how cities and rivers interact from the seventeenth century to the present Rising cities and industries were great agents of social and ecological changes particularly during the nineteenth century when mass populations and their effluents were introduced to river environments Accumulated pollution and disease mandated the transfer of wastes away from population centers In many cases potable water for cities now had to be drawn from distant sites These developments required significant infrastructural improvements creating social conflicts over land jurisdiction and affecting the lives and livelihood of nonurban populations The effective reach of cities extended and urban space was remade By the mid twentieth century new technologies and specialists emerged to combat the effects of industrialization Gradually the health of urban rivers improved From protoindustrial fisheries mills and transportation networks through industrial hydroelectric plants and sewage systems to postindustrial reclamation and recreational use Urban Rivers documents how Western societies dealt with the needs of mass populations while maintaining the viability of their natural resources The lessons drawn from this study will be particularly relevant to today's emerging urban economies situated along rivers and waterways

Confluence Sara B. Pritchard, 2011-04-04 Because of its location volume speed and propensity for severe flooding the Rh ne France's most powerful river has long influenced the economy politics and transportation networks of Europe Humans have tried to control the Rh ne for over two thousand years but large scale development did not occur until the twentieth century The Rh ne valley has undergone especially dramatic changes since World War II Hydroelectric plants nuclear reactors and industrialized agriculture radically altered the river as they simultaneously fueled both the physical and symbolic reconstruction of France In Confluence Sara B Pritchard traces the Rh ne's remaking since 1945 She interweaves this story with an analysis of how

state officials technical elites and citizens connected the environment and technology to political identities and state building In the process Pritchard illuminates the relationship between nature and nation in France Pritchard s innovative integration of science and technology studies environmental history and the political history of modern France makes a powerful case for envirotechnical analysis an approach that highlights the material and rhetorical links between ecological and technological systems Her groundbreaking book demonstrates the importance of environmental management and technological development to culture and politics in the twentieth century As Pritchard shows reconstructing the Rh ne remade France itself

A Modern History of European Cities Rosemary Wakeman,2020-01-23 Rosemary Wakeman s original survey text comprehensively explores modern European urban history from 1815 to the present day It provides a journey to cities and towns across the continent in search of the patterns of development that have shaped the urban landscape as indelibly European The focus is on the built environment the social and cultural transformations that mark the patterns of continuity and change and the transition to modern urban society Including over 60 images that serve to illuminate the analysis the book examines whether there is a European city and if so what are its characteristics Wakeman offers an interdisciplinary approach that incorporates concepts from cultural and postcolonial studies as well as urban geography and provides full coverage of urban society not only in western Europe but also in eastern and southern Europe using various cities and city types to inform the discussion The book provides detailed coverage of the often neglected urbanization post 1945 which allows us to more clearly understand the modernizing arc Europe has followed over the last two centuries

Rivers, Memory, And Nation-building Dorothy Zeisler-Vralsted,2014-11-01 Rivers figure prominently in a nation s historical memory and the Volga and Mississippi have special importance in Russian and American cultures Beginning in the pre modern world both rivers served as critical trade routes connecting cultures in an extensive exchange network while also sustaining populations through their surrounding wetlands and bottomlands In modern times Mother Volga and the Father of Waters became integral parts of national identity contributing to a sense of Russian and American exceptionalism Furthermore both rivers were drafted into service as the means to modernize the nation state through hydropower and navigation Despite being forced into submission for modern day hydrological regimes the Volga and Mississippi Rivers persist in the collective memory and continue to offer solace recreation and sustenance Through their histories we derive a more nuanced view of human interaction with the environment which adds another lens to our understanding of the past

Technology in Modern German History Karsten Uhl,2022-01-27 People often associate postwar Germany with technology and with its products of mass consumption such as luxury cars Even pop music most notably Kraftwerk literally power station with songs such as Autobahn Radioactivity or We are the Robots disseminates the stereotype of a close link between German culture and technology Technology in Modern German History explores various forms of technology in 200 years of German history and explains how technology has been fundamental to the shaping of modern Germany The book

investigates the role technology played in transforming Germany's culture, society and politics during the 19th and 20th centuries. Key topics covered include the different stages of industrialization, the growth of networked cities and the triumph of a teleological narrative of technology as progress. Moreover, it provides a critical revision of the history of high technology, which reveals how high-tech euphoria determined certain paths in history regardless of whether the respective technology proved to be successful. In its second part, the volume introduces new avenues in scholarship. Karsten Uhl examines neglected areas such as rural technologies or the often overlooked importance of everyday technologies. How did consumers or workers use new technologies? How did they appropriate and modify them? Lastly, the book considers the final decades of the 20th century and asks if they provided a significant new quality of technological change. To what degree and effects did computerization transform professional and private life in Germany? In culture and politics, reinforced by the German variety of environmentalism, the idea of progress was challenged as the once prevailing vision of progress gave way to new apprehensions of uncertainty evident to this day. Technology in Modern German History brings fascinating insight into a much neglected area of German history for students and scholars alike.

International Organizations and Environmental Protection Wolfram Kaiser, Jan-Henrik Meyer, 2016-12-01. Pollution, resource depletion, habitat management and climate change are all issues that necessarily transcend national boundaries. Accordingly, they and other environmental concerns have been a particular focus for international organizations from before the First World War to the present day. This volume is the first to comprehensively explore the environmental activities of professional communities, NGOs, regional bodies, the United Nations and other international organizations during the twentieth century. It follows their efforts to shape debates about environmental degradation, develop binding intergovernmental commitments and following the seminal 1972 Conference on the Human Environment, implement and enforce actual international policies.
