Signals from Space Robert Naeye,2001 The Chandra X ray Observatory is the largest object ever carried into space by the Space Shuttle

Scientists and engineers faced many challenges before they completed the powerful new satellite. But their hard work paid off. The National Aeronautics and Space Administration NASA launched Chandra in July 1999. Today this remarkable satellite sends vivid and astounding X-ray images back to Earth. American Book Publishing Record, 2001 **The Horn Book Guide to Children's and Young Adult Books**, 2001 **Library Media Connection**, 2001 Beyond Infinity Stephanie Warren Drimmer, 2024-10-15 See farther into the universe than ever before and discover how NASA's James Webb Space Telescope is unlocking the mysteries of space. Have you ever wondered what the universe looked like billions of years ago or asked yourself what might happen if galaxies collided? The James Webb Space Telescope gives us never-before-seen glimpses of the answers to these questions, showing us the birth and death of stars and galaxies, helping scientists find Earthlike planets and even revealing asteroids closer to home. This book explains the amazing science of the James Webb Space Telescope in a fun and accessible way, helping kids understand the big questions the telescope will help us answer. In this book, you'll find tons of beautiful photographs taken by the telescope, all with kid-friendly captions. You'll learn how the telescope works and how it was built, hear stories about the team behind it, and the science that made it possible to discover fun facts about the telescope and meet real NASA scientists. Above all, you'll delve into the mysteries of the universe and find out just how much more there is to discover. Perfect for budding astronomers, this book is an ideal introduction to the out-of-this-world discoveries of the James Webb Space Telescope. Full of the mind-blowing images that have captured the imagination of millions. Human Vision and The Night Sky Michael Borgia, 2006-12-11 For years the images have blazed through your imagination. They are the magnificent full-color photographs returned by the Hubble Space Telescope and its sister Great Observatories of the grand depths of the cosmos. From the pillars of creation, considered to be Hubble's signature image, to the incomprehensible depths of the Hubble Deep Fields, to the intricate details imaged in the surface and cloud tops of Mars or Jupiter, the power of the Hubble Telescope to turn on the public to science is unparalleled in the history of modern culture. They also have spurred new telescope sales to unimaginable highs. And after years of watching the heavens through the eyes of NASA, you've decided it's time to see it for yourself. You make the trip to the department store and pick up that shiny new 500-telescope set. It's up and soon you're in business. Unfortunately, the high initial expectations usually give way to disappointment. Instead of seeing the magnificent swirling clouds of gas in the Orion Nebula, you see a pale green-gray cloud with a couple of nondescript stars lurking nearby. The swirling red, yellow, and brown storms of Jupiter are nowhere to be seen, only varying shades of gray in the planet's cloud bands, assuming you can see bands at all. And Mars? After waiting all night for the red planet to rise up over the morning horizon, you are greeted by nothing more than a featureless reddish-orange dot.
