Sedimentation In A Synrogenic Basin Complex The Upper Carboniferous Of Northwest Europe

Daniel Korb

Sedimentation In A Synrogenic Basin Complex The Upper Carboniferous Of Northwest Europe:

Dynamique des corps sédimentaires clastiques dans les bassins Carbonifères de la Meseta marocaine Alain Izart, 1990 La première partie stratigraphique apporte des données nouvelles sur les différents tages et formations reconnus dans le carbonifère des bassins de la meseta marocaine en se référant à l'échelle des foraminifères. Une revue litho et biostratigraphique détaillée des formations du géocarbonifère a été réalisée à partir de références bibliographiques anciennes et récentes et des observations personnelles. La deuxième partie sédimentologique concerne les faciès, les séquences, les corps sédimentaires, les milieux de dépôt et leur succession dans l'espace et le temps. Les bassins étudiés présentent des milieux de dépôt très variés du domaine profond au domaine continental. La troisième partie présente les cartes paléogéographiques du famennien au stéphanien, autunien de la meseta marocaine et des bassins sahariens. Un essai de corrélation avec l'Europe est proposé. La meseta centrale et orientale seraient la continuité des zones rhénano-hercyniennes et saxo-thurigienne d'Europe et sont interprétées comme des bassins d'avant-pays de la chaîne hercynienne marocaine. La meseta orientale serait le prolongement d'une zone interne de la chaîne tectonique plus récente phase bretonne en contexte compressif.
