Recent Developments in Recruitment and Selection Kristina Potočnik, Neil Anderson, Marise Ph. Born, Martin Kleinmann, Ioannis Nikolaou, 2024-10-04. This book brings together top recruitment and selection scholars to discuss recent challenges in employee recruitment and selection underpinned by research evidence from different European countries. Broadly speaking, recruitment and selection are concerned with attracting qualified candidates to apply for available jobs and selecting the best ones from the pool of available candidates. As such, they are critical to any business. Numerous toolkits and best practice guides exist to help recruiters navigate different stages of recruitment and selection. However, traditional recruitment and selection practices should be adjusted to respond to diverse challenges in the current and future world of work related with increased volatility, uncertainty, complexity and ambiguity. Specific examples of these challenges are related with the accelerated use of technology and artificial intelligence as well as more flexible work practices such as hybrid and platform-based work. The chapters in this volume cover the use of technology and gamification, applicant discrimination and stigmatization and applicant reactions to technology-mediated selection methods among others. This book is the ideal text for students, scholars and researchers of HRM, Business and Management and Organizational Psychology. It will also interest practitioners and professionals in the field. The chapters in this book were originally published as a special issue of *European Journal of Work and Organizational Psychology*.

University of Toronto, 1881 A Closer Examination of Applicant Faking Behavior Richard L. Griffith, Mitchell H.

Peterson, 2006-05-01. The faking of personality tests in a selection context has been perceived as somewhat of a nuisance variable and largely ignored or glossed over by the academic literature. Instead of examining the phenomenon, many researchers have ignored its existence or trivialized the impact of faking on personality measurement. The present volume is a much needed, timely corrective to this attitude. In a wide range of chapters representing different philosophical and empirical approaches, the assembled authors demonstrate the courage to tackle this important and difficult topic head-on as it deserves to be. The writers of these chapters identify two critical concerns with faking. First, if people fake their responses to personality tests, the resulting scores and the inferences drawn from them might become invalid. For example, people who

fake their responses by describing themselves as diligent and prompt might earn better conscientiousness scores and therefore be hired for jobs requiring this trait that in fact they might not perform satisfactorily Second the dishonesty of the faker might itself be a problem separate from its effect on a particular score Someone who lies on a pre employment test might also lie about the hours he or she works or how much cash is in the till at the end of the shift Worse these two problems might exacerbate each other a dishonest applicant might get higher scores on the traits the employer desires through his or her lying whereas the compulsively honest applicant might get low scores as an ironic penalty for being honest Outcomes like these harm employers and applicants alike The more one delves into the complexities of faking as the authors of the chapters in this volume do so thoroughly and so well the more one will recognize that this seemingly specialized topic ties directly to more general issues in psychology One of these is test validity The bottom line question about any test score faked or not is whether it will predict the behaviors and outcomes that it is designed to predict As Johnson and Hogan point out in their chapter the behavior of someone faking a test is a subset of the behavior of the person in his or her entire life and the critical research question concerns the degree to which and manner in which behavior in one domain generalizes to behavior in other domains This observation illuminates the fact that the topic of faking is also a key part of understanding the relationship between personality and behavior The central goal of theoretical psychology is to understand why people do the things they do The central goal of applied psychology is to predict what someone will do in the future Both of these goals come together in the study of applicant faking
