Long Reinforced Concrete Columns Reinforced Concrete Research Council (U.S.),1986-01-01 Papers selected by the Reinforced Concrete Research Council of ASCE This collection contains 13 papers reporting the results of a series of studies begun in 1960 on the behavior of long reinforced concrete columns in frames This report also includes additional studies limit design aspects of column and frame stability that were proposed in 1967 Findings from these studies resulted in important changes in the slenderness provisions for reinforced concrete columns adopted in the 1983 American Concrete Institute building code Long Slender Reinforced Concrete Columns Adriana Dracos,Andreas Dracos,University of Bradford,1982 Design Method for Long Reinforced Concrete Columns Joseph Maurice Spang,1966 *Long Reinforced Concrete Columns* ,1986 **Design Examples for High Strength Steel Reinforced Concrete Columns** Sing-Ping Chiew,Yanqing Cai,2018-04-17 This book is the companion volume to Design of High Strength Steel Reinforced Concrete Columns A Eurocode 4 Approach This book provides a large number of worked examples for the design of high strength steel reinforced concrete SRC columns It is based on the Eurocode 4 approach but goes beyond this to give much needed guidance on the narrower range of permitted concrete and steel material strengths in comparison to EC2 and EC3 and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete Special considerations are given to resistance calculations that maximize the full strength of the materials with concrete cylinder strength up to 90 N mm² yield strength of structural steel up to 690 N mm² and yield strength of reinforcing steel up to 600 N mm² respectively These examples build on the design principles set out in the companion volume allowing the readers to practice and understand the EC4 methodology easily Structural engineers and designers who are familiar with basic EC4 design should find these design examples particularly helpful whilst engineering undergraduate and graduate students who are studying composite steel concrete design and construction should easily gain further understanding from working through the worked examples which are set out in a step by step clearly fashion *Ultimate Strength Analysis of Long Hinged Reinforced Concrete Columns* Bengt Broms,I. M. Viest,Ivan Miroslav Viest,1956 *Ultimate Strength of Long Reinforced Concrete Columns* Bengt Baltzar Broms,1956 *The Strength of Long Reinforced Concrete Columns Under Combined Direct Stress and Bending* F. Williams, 2004 Here is a comprehensive guide and reference to assist civil engineers preparing for the Structural Engineer Examination It offers 350 pages of text and 70 design problems with complete step by step solutions Topics covered Materials for Reinforced Concrete Limit State Principles Flexure of Reinforced Concrete Beams Shear and Torsion of Concrete Beams Bond and Anchorage Design of Reinforced Concrete Columns Design of Reinforced Concrete Slabs and Footings Retaining Walls and Piled Foundations An index is provided The Strength of Long Reinforced Concrete Columns with Special Reference to the Effects of Creep J. M. Prentis, 1947 **The Behavior of Long, Hinged End Reinforced Concrete Columns Under Sustained Axial Load and Biaxial Bending** Charles E. Vandeveld, 1968 Slender Reinforced Concrete Columns Under Load and Moment David Schofield, 1983 Slender reinforced concrete columns have become widely used as structural members in recent years Current Codes of Practice for Structural Concrete lack sufficient guidance to designers for their safe and efficient design This investigation studies the behaviour of very slender pin ended reinforced concrete columns under short term and sustained loads by experiment and theoretical analysis A new approach is used in the method of applying load to the column A concentric axial load and independent primary end moments are considered This allows the determination of secondary moments due to axial force and secondary deflections to be easily determined compared with the conventional eccentric load methods adopted in the past A non linear second order computer analysis has been developed which is capable of accurately predicting the deflections of hinged columns throughout the loading range from zero load to buckling failure for any combination of eccentric loads and primary moments for short or sustained periods It has the potential to accept end restraint in order to model framed columns An extensive experimental programme of tests has been performed on 48 column specimens with slenderness ratios between 29 and 59 under short term loads and 5 specimens under sustained loads for up to two years A total of 68 short column specimens with an identical section to the slender columns and material specimens were also tested The specimens had a mean wet cured cube strength of 42 N sq mm The results of these tests and 120 similar results of other authors confirmed the validity of the proposed theoretical analysis and the assumptions used The computer program which is presented could be made available to design offices for use on a basic micro computer The design methods recommended by three Codes of Practice CP110 1972 ACI318 1977 and CP114 1957 have been compared with the experimental and theoretical results of this work CP110 and ACI318 are shown to give conservative designs with an overall load factor of 3.0 and 2.4 respectively for design loads compared with the 25 year load
