The Reflexive Nature of Consciousness Greg Janzen, 2008-03-27 Combining phenomenological insights from Brentano and Sartre but also drawing on recent work on consciousness by analytic philosophers this book defends the view that conscious states are reflexive and necessarily so i.e. that they have a built in implicit awareness of their own occurrence such that the subject of a conscious state has an immediate non objectual acquaintance with it As part of this investigation the book also explores the relationship between reflexivity and the phenomenal or what it is like dimension of conscious experience defending the innovative thesis that phenomenal character is constituted by the implicit self awareness built into every conscious state This account stands in marked contrast to most influential extant theories of phenomenal character including qualia theories according to which phenomenal character is a matter of having phenomenal sensations and representationalism according to which phenomenal
