Marshall, 1934 Lough Neagh Places Patrick McKay, Kay Muhr, 2007-01-01 Lough Neagh covers an area of one hundred and forty nine square miles and is the largest lake in Britain and Ireland and the fifth largest in Europe It is approximately nineteen miles long and ten miles wide This book deals with the place names of the area and takes the form of a journey round the lough beginning and ending at the historic town of Antrim at the north eastern corner In the course of this journey a wide range of place names is encountered ranging from names of rocks and islands to names of townlands towns villages rivers parishes and native Irish territories some of which have fallen out of use but all of which provide a fascinating insight into the character of the region and its history *Lough Neagh* R.B. Wood, R.V. Smith, 2013-04-18 Lough Neagh is the largest lake in the British Isles It covers an area of 383 km² being 30 km along its longest axis From pre historic times the lake and its rivers influenced the settlements of man in the role of a fishery and communication link with the interior of Ireland Ireland's first canal completed in 1787 linked the small but significant coal deposits of Tyrone to Dublin by way of the lough and later the Lagen Canal became an important commercial route to the new city of Belfast Today only sand barge transport persists but the lough supports Europe's largest eel fishery and provides commercial salmon trout and perch catches besides acting as an important centre for recreational pursuits Increasingly it has become the major water resource for Northern Ireland supplying much of the demand for the heavily populated Belfast area Biologically the lough is rich sustaining enormous invertebrate populations of for example chironomids and gammarids alongside the comparatively exotic glacial relict *Mysis relicta* Its bird life makes the lough an area of very special conservation interest as a Ramsar site The book describes the basic ecology of the lough with particular emphasis on both the interaction of the physical chemical and biological components and the role of ecology in resource management Extensive recent researches are set in geological geographical and historical context and together with palaeolimnological studies of the sediments are used to trace major changes in the ecology of the lough under man's influence especially in the past 100 years **Pamphlets on Protozoology (Kofoid Collection)** , 1907 Mapping the
