Applications Linjie Zhi,Yingjie Ma,Debin Kong,Sijia Hao,2025-03-24 This book proposes the systematic classification and exact definition of all the products from graphene functionalization which are illustrated by several representative examples Additionally the corresponding preparation strategies of functionalizing graphene are summarized and are demonstrated by some typical approaches All the products from graphene functionalization are defined as functionalized graphene materials which fall into two categories functionalized graphene and functionalized graphene composite Functionalized graphene is the product of modifying graphene by tuning its composition framework dimension and morphology and functionalized graphene composites are hybrids of graphene or functionalized graphene with other materials including small molecules polymers

metals inorganic compounds and carbon nanotubes CNTs Functionalized graphene materials are prepared through two strategies top down and bottom up each of which has its advantages and shortcomings and includes many corresponding preparation methods The selection of preparation strategies depends on the application requirements as different applications require different types of graphene Both strategies are elucidated with detailed examples through an extensive analysis of the literature Finally the major challenges and perspectives of functionalized graphene materials are discussed
