Alternative Types of Roundabouts Tomaž Tollazzi, 2014-11-07 This book presents a history of roundabouts an introduction to their design calculations of their capacity and traffic safety features It describes the key features of standard roundabouts and their limitations Alternative types of roundabouts are a fairly recent development and have only been implemented in a few countries to date The book illustrates a broad variety of these recent alternative types of roundabouts as well as proposed types still in the development phase explaining for each the specific needs it meets its advantages and drawbacks In closing the book offers an outlook on the role of roundabouts in future street traffic

Roundabout Practices Alek Pochowski, Andy Paul, Lee August Rodegerdts, 2016 As of 2013 there were an estimated 3 200 roundabouts in use throughout the country This synthesis documents and summarizes roundabout policies guidance and practices in place within state departments of transportation DOTs as of 2015 The primary focus of the synthesis is on roundabout selection and design with a secondary focus on performance analysis Information used in this study was gathered through a literature review and a survey of state DOTs Personnel from seven states were interviewed to create case examples and more specific information Among the findings the primary reason cited for the selection of roundabouts is improved safety performance compared with other intersection options followed by shorter vehicular delays and higher capacity Planning level cost estimates screening or feasibility level estimates for mini single lane and multilane roundabouts ranged from 249 000 to 2 05 million The majority of reporting states have developed some public education materials to support roundabout projects such as websites videos and flyers and or pamphlets To analyze roundabout performance about three quarters of the reporting states use some form of the Highway Capacity Manual 2010 model and SIDRA's Standard Model Most of the reporting states analyze safety performance at roundabouts using crash modification factors crash reduction factors and or the Highway Safety Manual predictive methodology Most states use a design life of 20 years when developing the ultimate roundabout design However the majority uses a phased implementation approach
