RS/6000 Scientific and Technical Computing ,1998 A Parallel Algorithm Synthesis Procedure for High-Performance Computer Architectures Ian N. Dunn, Gerard G.L. Meyer, 2012-09-14 Despite five decades of research parallel computing remains an exotic frontier technology on the fringes of mainstream computing Its much heralded triumph over sequential computing has yet to materialize This is in spite of the fact that the processing needs of many signal processing applications continue to eclipse the capabilities of sequential computing The culprit is largely the software development environment Fundamental shortcomings in the development environment of many parallel computer architectures thwart the adoption of parallel computing Foremost parallel computing has no unifying model to accurately predict the execution time of algorithms on parallel architectures Cost and scarce programming resources prohibit deploying multiple algorithms and partitioning strategies in an attempt to find the fastest solution As a consequence algorithm design is largely an intuitive art form dominated by practitioners who specialize in a particular computer architecture This coupled with the fact that parallel computer architectures rarely last more than a couple of years makes for a complex and challenging design environment To navigate this environment algorithm designers need a road map a detailed procedure they can use to efficiently develop high performance portable parallel algorithms The focus of this book is to draw such a road map The Parallel Algorithm Synthesis Procedure can be used to design reusable building blocks of adaptable scalable software modules from which high performance signal processing applications can be constructed The hallmark of the procedure is a semi systematic process for introducing parameters to control the partitioning and scheduling of computation and communication This facilitates the tailoring of software modules to exploit different configurations of multiple processors multiple floating point units and hierarchical memories To showcase the efficacy of this procedure the book presents three case studies requiring various degrees of optimization for parallel execution OpenMP Shared Memory Parallel Programming Michael J. Voss, 2007-03-05 The refereed proceedings of the International Workshop on OpenMP Applications and Tools WOMPAT 2003 held in Toronto Canada in June 2003 The 20 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers are organized in sections on tools and tool technology OpenMP implementations OpenMP experience and OpenMP on clusters Monthly Weather Review ,2002-05 **SIAM Journal on Scientific Computing** ,2007 **A Cache-friendly Liquid Load Balancer** Federico David Sacerdoti, 2002 *Proceedings* ,2002 **Automatic Performance Tuning of Sparse Matrix Kernels** Richard Wilson Vuduc, 2003 **ACM SIGPLAN notices** ,1991 *Rs/6000 Scalable Powerparallel System* Ibm Redbooks, 1996 *The Power4 Processor Introduction and Tuning Guide* ,2001
