British Birds appeared in 1909 and it may surprise many to discover how much of practical ornithology that is deliberated today was debated and practised so many years ago During more than seventy years the author has witnessed important changes in resident and migrant bird populations in Britain Dungeness for example was almost as uninhabited as the moon when he first knew it and Kentish Plovers bred there by the score but Carrion Crows were a rarity Over the years he saw the gradual decline of the Red backed Shrike Corncrake and Wryneck but he was instrumental in bringing one bird to Britain the hitherto undiscovered Willow Tit which he with others helped to identify Fifty years ago H G Alexander had already covered scores of six inch Ordnance Survey maps with his mapping records and these together with his notebooks and correspondence with contemporaries supply an absorbing glimpse of a birdwatching era that was fascinatingly like and yet unlike our own Perhaps this is why today's birdwatcher has only to turn the pages to be enthralled
