Scientific Determination Of The Merits:

The Measure of Merit John Carson, 2025-10-28 A wide ranging account of American and French understandings of merit talent and intelligence over the past two centuries How have modern democracies squared their commitment to equality with their fear that disparities in talent and intelligence might be natural persistent and consequential John Carson tells the fascinating story of how two nations wrestled scientifically with human inequalities and their social and political implications Surveying a broad array of political tracts philosophical treatises scientific works and journalistic writings Carson chronicles the gradual embrace of the IQ version of intelligence in the United States while in France the birthplace of the modern intelligence test expert judgment was consistently prized above such quantitative measures He also reveals the crucial role that determinations of and contests over merit have played in both societies they have helped to organize educational systems justify racial hierarchies classify army recruits and direct individuals onto particular educational and career paths A contribution to both the history of science and intellectual history The Measure of Merit illuminates the shadow languages of inequality that have haunted the American and French republics since their inceptions *Federal research : DOE is providing independent review of the scientific merit of its research : report to the Committee on Science, House of Representatives* ,

A Review of NASA Human Research Program's Scientific Merit Assessment Processes Institute of Medicine, Board on Health Sciences Policy, Committee on the Review of NASA Human Research Program's Scientific Merit Assessment Processes, 2012-09-20 At the request of NASA an IOM committee reviewed NASA Human Research Program's HRP's Scientific Merit Assessment Processes for directed research Directed research is commissioned or noncompetitively awarded research that is not competitively solicited because of specific reasons such as time limitations or highly focused or constrained research topics The scientific merit assessment processes have been developed by NASA to evaluate individual directed research tasks in order to ensure the scientific integrity of the HRP's directed research portfolio The committee examined the HRP's current scientific merit assessment processes and conducted a public workshop to identify best practices among other federal agencies that use various assessment processes for similar types of directed research Review of NASA Human Research Program's Scientific Merit Processes Letter Report finds that the scientific merit assessment process used by the HRP for directed research is scientifically rigorous and is similar to the processes and merit criteria used by many other federal agencies and organizations including the Department of Defense National Institutes of Health and the United States Department of Agriculture for comparable types of research This report also makes recommendations on ways to streamline and bolster the accountability and transparency of NASA's current processes

Merit goods determined by society value judgments – Political implications for public participation Christina Rüffer, 2012-03-09 When behavioral results repeatedly fail to be explained by the assumption that people act as *homines economici* these stable response patterns have to be analyzed by a different approach The concept of merit goods offers one

explanation In this book prevailing misconceptions about merit goods are unveiled and the legitimation and political relevance of the merit good argument when based on society value judgments are demonstrated Society value judgment in this context means that citizens prefer to decide according to society's best interest rather than in their personal interest Governmental intervention interfering with individual preferences however is often considered as interfering with consumer sovereignty In this book participation is proposed as the missing link between the merit good concept and its compatibility with consumer sovereignty The book also considers what reasonable participation could look like Thus being a merit good is not a characteristic but must rather be seen as the estimation of the people determined by history values culture current situation knowledge etc and must therefore be analyzed as this In this book merit goods will be determined and useful participation pointed out using ecological goods from a case study of a result oriented agri environmental program as example

Animal Models for the Study of Human Disease P. Michael Conn, 2013-05-29 Animal Models for the Study of Human Disease identifies important animal models and assesses the advantages and disadvantages of each model for the study of human disease The first section addresses how to locate resources animal alternatives animal ethics and related issues much needed information for researchers across the biological sciences and biomedicine The next sections of the work offers models for disease oriented topics including cardiac and pulmonary diseases aging infectious diseases obesity diabetes neurological diseases joint diseases visual disorders cancer hypertension genetic diseases and diseases of abuse Organized by disease orientation for ease of searchability Provides information on locating resources animal alternatives and animal ethics Covers a broad range of animal models used in research for human disease

Science, Technology, and Democracy Daniel Lee Kleinman, 2000-09-28 Activists scientists and scholars in the social sciences and humanities explore in productive dialogue what it means to democratize science and technology The contributors consider what role lay people can have in a realm traditionally restricted to experts and examine the socio economic and ideological barriers to creating a science oriented more toward human needs Included are several case studies of efforts to expand the role of citizens including discussions of AIDS treatment activism technology consensus conferences in Europe and the United States the regulation of nuclear materials processing and disposal and farmer networks in sustainable agriculture and examinations of how the Enlightenment premises of modern science constrain its field of vision Other chapters suggest how citizens can interpret differing opinions within the scientific communities on issues of clear public relevance

Merit, Justice, and the Political Theory of Academic Knowledge Production Camilla Boisen, Matthew C. Murray, 2024-08-09 Academia has long established itself as an institution of knowledge and ideas Facing pressure many academic fields and institutions have turned their attention singularly and collectively to the task of what to do to rectify the causes of under representations both academic knowledge itself and who gets to be an academic producer of knowledge Boisen and Murray argue that simply solving the contemporary symptoms of inequity in ideas knowledge production and the academy is not enough Political Theory must be used to analyze why dominant ideas and institutions namely merit and the resulting meritocracy and meritocratic procedures were given power in the first place In using political theory and theories of justice the book argues that academia must radically shift rather than procedurally reform these methods of evaluation in order to achieve a more coherent approach to diversity in ideas academic knowledge producers and academic knowledge production which are necessary to bring about other forms of social change and reform in our larger world In questioning the ideals and the use of rival ideals to temper flawed concepts the present motivations and justifications for producing academic knowledge can be relegated as political tools allowing true meaningful reform Boisen and Murray show how contemporary crises in academia around diversification of perspectives can only be solved by considering the justifications of academic knowledge production and the inherent risk of retaining the established competitive and presumptively natural but ultimately biased methods of deriving academic authority

interested in processing measurement results **Merit Aid and the Politics of Education** Erik C. Ness, 2007-11-13 While a substantial number of studies have evaluated the effects of merit aid programs there is a surprising lack of any systematic consideration of how states determine eligibility criteria for these scholarships The selectivity of merit aid eligibility criteria can be as important as whether or not such programs are adopted If for example merit aid programs have broad easily attained initial eligibility criteria then a large proportion of high school graduates including low income and under represented students will gain eligibility On the other hand if the criteria are more rigorous then a smaller proportion of students likely those already planning to attend and with the means to afford college will be eligible Thus this innovative book the first to deepen the descriptive and conceptual understanding of the process by which states determine merit aid scholarship criteria is crucial to understanding merit aid's success and failures at fulfilling the promise of education The Journal of the Society of Automotive Engineers ,1921 **Journal of the Society of Automotive Engineers** ,1921 Vols 30 54 1932 46 issued in 2 separately paged sections General editorial section and a Transactions section Beginning in 1947 the Transactions section is continued as SAE quarterly transactions The Armed Forces Epidemiological Board Theodore Englar Woodward, 1990 **Popular Science Monthly** ,1928 **The Teaching of Physical Science** John Francis Woodhull, 1910 **AFHRL-TR.** Air Force Human Resources Laboratory, 1968 *Merit* Joseph Kett, 2013-01-15 The idea that citizens advancement should depend exclusively on merit on qualities that deserve reward rather than on bloodlines or wire pulling was among the Founding ideals of the American republic Joseph F Kett argues in this provocative and engaging book Merit's history he contends is best understood within the context of its often conflicting interaction with the other ideals of the Founding equal rights and government by consent Merit implies difference equality suggests sameness By sanctioning selection of those lower down by those higher up merit potentially conflicts with the republican ideal that citizens consent to the decisions that affect their lives In *Merit* which traces the history of its subject over three centuries Kett asserts that Americans have reconciled merit with other principles of the Founding in ways that have shaped their distinctive approach to the grading of public schools report cards the forging of workplace hierarchies employee rating forms merit systems in government the selection of officers for the armed forces and standardized testing for intelligence character and vocational interests Today the concept of merit is most commonly associated with measures by which it is quantified Viewing their merit as an element of their selfhood essential merit members of the Founding generation showed no interest in quantitative measurements Rather they equated merit with an inner quality that accounted for their achievements and that was best measured by their reputations among their peers In a republic based on equal rights and consent of the people however it became important to establish that merit based rewards were within the grasp of ordinary Americans In response Americans embraced institutional merit in the form of procedures focused on drawing small distinctions among average people They also developed a penchant for increasing the number of winners in competitions what Kett calls selection in rather than

selection out in order to satisfy popular aspirations Kett argues that values rooted in the Founding of the republic continue to influence Americans approach to controversies including those surrounding affirmative action which involve the ideal of merit
