**Europe, 1500-1800: A Primary Sources Reader** Malcolm Oster, 2020-02-13 The period from Copernicus to Newton witnessed a Scientific Revolution which eventually led to modern science and both built upon and sharply challenged the earlier natural philosophies of the classical world Science in Europe 1500 1800 A Primary Sources Reader offers a fascinating picture of the world of the scientific revolution through the eyes of those involved This selection of primary sources is geographically inclusive including often neglected areas such as Spain Scandinavia and central eastern Europe and thematically wide ranging illustrating early modern Europe s interplay of social cultural and intellectual traditions A key resource for all students and teachers of the history of science Malcolm Oster s masterly collection offers an introduction to the conceptual and institutional foundations of modern science This volume can be used alongside or independently of its companion volume Science in Europe 1500 1800 A Secondary Sources Reader also edited by Malcolm Oster      **A Culture of Improvement** Robert Friedel, 2010-02-26 How technological change in the West has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer Why does technology change over time how does it change and what difference does it make In this sweeping ambitious look at a thousand years of Western experience Robert Friedel argues that technological change comes largely through the pursuit of

improvement the deep rooted belief that things could be done in a better way What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war Improvements can be ephemeral or lasting and one person s improvement may not always be viewed as such by others Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not These processes he emphasizes have created both winners and losers in history Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide The most comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated *A Culture of Improvement* documents the ways in which the drive for improvement has shaped our modern world

Clarke, 2014-10-24 This major study reflects the increasing significance of careful model formation and testing in those academic subjects that are struggling from intuitive and aesthetic obscurantism toward a more disciplined and integrated approach to their fields of study The twenty six original contributions represent the carefully selected work of progressive archaeologists around the world covering the use of models on archaeological material of all kinds and from all periods from Palaeolithic to Medieval Their common theme is archaeological generalisation by means of explicit model building testing modification and reapplication The contributors seek to show that it is the use of certain models in particular ways that defines archaeology as the practice of one discipline with a set of general tenets that are as applicable in Peru as in Persia Australia as Alaska Sweden as Scotland on material from the second millennium B C to the second millennium A D They assert that careful model formulation within archaeology and the cautious exchange and testing of models within and beyond the discipline provides the only route to the formation of the common internationally valid body of theory which defines a vigorous and coherent discipline and distinguishes it from being a collection of merely regionally applicable special cases      The Impact of Humanism on Western Europe During the Renaissance A. Goodman, Angus Mackay, 2014-06-11 An up to date synthesis of the spread and impact of humanism in Europe A team of Renaissance scholars of international reputation including Peter Burke Sydney Anglo George Holmes and Geoffrey Elton offers the student academic and general reader an up to date synthesis of our current understanding of the spread and impact of humanism in Europe Taken together these essays throw a new and searching light on the Renaissance as a European phenomenon
