The history of chemistry is a story of human endeavor and as essential as human nature itself Progress has been made in fits and starts and it has come from all parts of the globe Because the scope of this history is considerable some 100 000 years it is necessary to impose some order and we have organized the text around three discernible albeit gross divisions of time Part 1 Chaps 1-7 covers 100 000 BCE Before Common Era to the late 1700s and presents the background of the Chemical Revolution Part 2 Chaps 8-14 covers the late 1700s to World War I and presents the Chemical Revolution and its consequences Part 3 Chaps 15-20 covers World War I to 1950 and presents the Quantum Revolution and its consequences and hints at revolutions to come There have always been two tributaries to the chemical stream experiment and theory But systematic experimental methods were not routinely employed until the 1600s and quantitative theories did not evolve until the 1700s and it can be argued that modern chemistry as a science did not begin until the Chemical Revolution in the 1700s xi xii PREFACE We argue however that the first experiments were performed by artisans and the first theories proposed by philosophers and that a revolution can be understood only in terms of what is being revolted against *Introducing Science through Images* Maria E. Gigante,2018-06-01
An examination of how images can serve as communication tools to popularize science in the public eye As funding for basic scientific research becomes increasingly difficult to secure public support becomes essential Because of its promise for captivating nonexpert publics the practice of merging art and imagery with science has been gaining traction in the scientific community While images have been used with greater frequency in recent years their value is often viewed as largely superficial To the contrary Maria E Gigante posits in *Introducing Science through Images* the value of imagery goes far beyond mere aesthetics visual elements are powerful communication vehicles The images examined in this volume drawn from a wide range of historical periods serve an introductory function that is they appear in a position of primacy relative to text and like the introduction to a speech have the potential to make audiences attentive and receptive to the forthcoming content Gigante calls them portal images and explicates their utility in science communication both to popularize and mystify science in the public eye Gigante analyzes how science has been represented by various types of portal images frontispieces portraits of scientists popular science magazine covers and award winning scientific images from Internet visualization competitions Using theories of rhetoric and visual communication she addresses the weak connection between scientific communities and the public and explores how visual elements can best be employed to garner public support for research
