Noninvasive Methods for the Quantification of Skin Functions Peter J. Frosch, Albert M. Kligman, 2012-12-06 More than 10 years ago I had the chance to visit the university hospital in Munster Germany At the outpatient clinic there I accidentally met a young dermatologist who was devoted to the study of the quantification of irritated skin during his busy daily clinical work I sensed immediately that this Dr P Frosch was conducting his research with the ideals and enthusiasm which were so familiar to me Soon we found

that we shared a similar past experience we both had begun our careers in dermatological investigation with the same mentor For me it was more than 25 years ago that I first met Dr Kligman Professor at the University of Pennsylvania in Philadelphia USA I reminisced that I had been greatly shocked by his initial question As a dermatologist do you want to study living or dead skin because at that time and even today whenever we cannot collect enough information about the skin with the naked eye it is invasively removed is common practice to histologically examine a skin sample that from living tissue Many dermatologists still would never think of studying the living intact skin itself noninvasively with the aid of existing advanced technologies to assess its structural and functional properties At that time Dr Kligman intended to build up a system of evaluating the skin from various aspects using methods that had been unduly neglected in the past and introducing various technological instruments
