Kiss,2013-10-22 Invited contributions from distinguished practitioners and methodologists of operational research and applied systems analysis which represent a true state of the art and which provide perhaps for the first time a coherent interlocking set of ideas which may be considered the foundations of the subject as a science in its own right

Social Knowledge Paul Mattick, 2019-11-26 How is scientific knowledge of social life possible If there are social sciences must they employ methods different from those of the natural sciences In Social Knowledge Paul Mattick argues that the well known difficulties of the social sciences in particular the predictive and explanatory failures of economics are due not to an inherent resistance of social life to scientific explanation but to the failure of social scientists to include their own categories of social explanation among the objects of scientific study Looking at Marx as an anthropological theorist Mattick compares his critique of political economy with Evans Pritchard's analysis of Azande witchcraft Just as the British anthropologist attempted to explain Azande ideas and rituals in terms of their place in native life Marx wished to explain the continued faith in economics despite its striking weakness as a science in terms of the central role played by this system of ideas in the daily lives of natives of capitalist society This comparison leads to the questions about the nature of scientific thinking and its relation to our everyday knowledge of social reality that are the subject of this book Second edition with a new Preface by the author The first edition was published in 1986 by Hutchinson ISBN 9780091654603

Advances in Policy Studies Since 1950 William N. Dunn, Rita Mae Kelly, This latest volume of the Policy Studies Review Annual series brings together leading policy scientists in a comprehensive review of the field's achievements since its professionalization some forty years ago If an advance is defined as an improvement in theory methodology information or practice how does the field measure up And what should its next goals be This unusual compendium of entirely new essays and articles helps to answer such questions On balance the contributors show the record is mixed Policy sciences draw on the theoretical foundations of many disciplines but have not themselves contributed theoretical advances We have more information but information in itself does not constitute an advance Despite improved interaction between academia and government it is difficult to identify new or better policies that have resulted On the other hand there have been impressive advances in methodology procedures for conducting inquiry that yield reliable and relevant
