Skloot,2020-12-15 This anthology of essays and articles explores topics ranging from untouched wilderness to scientific ethics and the nature of curiosity itself Scientists and writers are both driven by a dogged curiosity immersing themselves in detailed observations that over time uncover larger stories As Rebecca Skloot says in her introduction all the stories in this collection are written by and about people who take the time and often a substantial amount of risk to follow curiosity where it may lead so we can all learn about it The Best American Science and Nature Writing 2015 includes work from both award

winning writers and up and coming voices in the field From Brooke Jarvis on deep ocean mining to Elizabeth Kolbert on New Zealand's unconventional conservation strategies this is a group that celebrates the growing diversity in science and nature writing alike Altogether the writers honored in this volume challenge us to consider the strains facing our planet and its many species while never losing sight of the wonders we're working to preserve for generations to come This anthology includes essays and articles by Sheri Fink Atul Gawande Leslie Jamison Sam Kean Seth Mnookin Matthew Power Michael Specter and others

Russey, 2004-03-12 Most scientists live in a publish or perish environment but few would describe themselves as brilliant or enthusiastic writers Coming to the aid of all those wishing to improve the quality of their scientific writing established researchers and aspiring students alike three experienced authors scientists from differing backgrounds and cultures have compiled this classic guide This new edition has been completely revised to reflect dramatic changes in communication over the past 15 years The primary emphasis is on writing techniques accurate expression adherence to accepted standards and above all clarity but the authors also venture into communication technology and organizational as well as ethical aspects of science Numerous appendices and a particularly comprehensive index complete this highly useful book The authors have a passion not only for clarity and economy of style but also for precision and consistency Nature A wealth of information contained in a single book of manageable proportions Students reporting on a simple laboratory experiment and their teachers preparing a paper or lecture will both find this book a constant companion European Science Editing The book under review claims we know of no book as broad in its coverage as critical in its analysis of existing trends and as international in its scope This claim is immodest but accurate Trends in Pharmacological Sciences

Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science

communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

How Superstition Won and Science Lost
John Chynoweth Burnham,1987 John Burnham studies the history of changing patterns in the dissemination or popularization of scientific findings to the general public since 1830 Focusing on three different areas of science health psychology and the natural sciences Burnham explores the ways in which this process of popularization has deteriorated He draws on evidence ranging from early lyceum lecturers to the new math and argues that today popular science is the functional equivalent of superstition
