Sculpturing Of Zion Guide To The Geology Of Zion:

The Sculpturing of Zion Wayne L. Hamilton, 1984 **Late Holocene Alluvial Geomorphology of the Virgin River in the Zion National Park Area, Southwest Utah** Richard Hereford, Gordon Jacoby, V. Alexander S. McCord, 1996-01-01

The Ribbon of Green Robert H. Webb, S. A. Leake, Raymond M. Turner, 2007 Woody wetlands constitute a relatively small but extremely important part of the landscape in the southwestern United States. These riparian habitats support more than one third of the region's vascular plant species, are home to a variety of wildlife, and provide essential havens for dozens of migratory animals. Because of their limited size and disproportionately high biological value, the goal of protecting wetland environments frequently takes priority over nearly all other habitat types. In *The Ribbon of Green*, hydrologists Robert H. Webb and Stanley A. Leake and botanist Raymond M. Turner examine the factors that affect the stability of woody riparian vegetation, one of the largest components of riparian areas. Such factors include the diversion of surface water, flood control, and the excessive use of groundwater. Combining repeat photography with historical context and information on species composition, they document more than 140 years of change. Contrary to the common assumption of widespread losses of this type of ecosystem, the authors show that vegetation has increased on many river reaches as a result of flood control, favorable climatic conditions, and large winter floods that encourage ecosystem disturbance, germination, and the establishment of species in newly generated openings. Bringing well-documented and accessible insights to the ecological study of wetlands, this book will influence our perception of change in riparian ecosystems and how riparian restoration is practiced in the Southwest, and it will serve as an important reference in courses on plant ecology, riparian ecology, and ecosystem management.

Landslides from Massive Rock Slope Failure Stephen G. Evans, Gabriele Scarascia Mugnozza, Alexander Strom, Reginald L. Hermanns, 2007-05-17 Amongst the thematic topics discussed are global frequency, impacts on society, analysis of initial rock slope failure, monitoring of rock slope movement, analysis and modeling of post failure behaviour, volcanic landslides, and influences of massive rock slope failure on the geomorphological evolution of mountain regions. Regional contributions include reports on rockslides and rock avalanches in Norway, western Canada, the Andes of Argentina, the Karakoram Himalaya, the European Alps, the Appennines, and the mountains of Central Asia. Rockslides and rock avalanches in the Central Asian republics of the former Soviet Union are discussed in detail for the first time in an English language book. These landslides include the 1911 Usoi rockslide that dammed 75 km long Lake Sarez and the 1949 Khait rock avalanche that may have killed up to 28,000 people. Both landslides were earthquake triggered and both are located in Tajikistan. An additional highlight is a detailed description and analysis of large scale artificial rock avalanches triggered by underground nuclear explosions during the testing programme of the former Soviet Union.
