S.

Stavrianos,2015-03-04 This book offers an extraordinary interpretation of world history from the paleolithic era to the present. Renowned historian L. S. Stavrianos conceptualizes human history into three categories: kinship societies, tributary societies, and capitalist societies. In each, he discerns and studies four life-line issues: ecology, gender relations, social relations, and war, that encompass the broadest areas of human experience. The revised edition projects forward to the twenty-first century, offering the author's views on possible future scenarios involving the same lifeline issues. Colonialism and the Modern World Gregory Blue, Martin Bunton, Ralph C. Croizier, Ralph, 2016-07-08 This collection fills the need for a resource that adequately conceptualizes the place of non-European histories in the larger narrative of world history. These essays were selected with special emphasis on their comparative outlook. The chapters range from the British Empire in India, Egypt, Palestine to Indonesia, French colonialism in Brittany and Algeria, South Africa, Fiji, and Japanese imperialism. Within the chapters, key concepts such as gender, land, and law, and regimes of knowledge are considered. **The Story of N** Hugh S. Gorman, 2013-01-24 In *The Story of N*, Hugh S. Gorman analyzes the notion of sustainability from a fresh perspective: the integration of human activities with the biogeochemical cycling of nitrogen and provides a supportive alternative to studying sustainability through the lens of climate change and the cycling of carbon. It is the first book to examine the social processes by which industrial societies learned to bypass a fundamental ecological limit and later began addressing the resulting concerns by establishing limits of their own. The book is organized into three parts: Part I, *The Knowledge of Nature*, explores the emergence of the nitrogen cycle before humans arrived on the scene and the changes that occurred as stationary agricultural societies took root; Part II, *Learning to Bypass an Ecological Limit*, examines the role of science and market capitalism in accelerating the pace of innovation, eventually allowing humans to bypass the activity of nitrogen-fixing bacteria; Part III, *Learning to Establish Human-Defined Limits*, covers the twentieth-century response to the nitrogen-related concerns that emerged as more nitrogenous compounds flowed into the environment. A concluding chapter, *The Challenge of Sustainability*, places the entire story in the context of constructing an ecological economy in which innovations that contribute to sustainable practices are rewarded. **The Face of the Earth** J. Donald Hughes, 2015-05-11 Although the organizing principle of virtually every world history text is development, the editor of this volume maintains that this traditional approach fails to address the issue of sustainability. By adopting the ecological process as their major theme, the authors show how the process of human interaction with the natural environment unfolded in the past and offer perspective on the ecological crises in our world at the beginning of the 21st century. Topics range from broad regional studies that examine important aspects of the global environment that affect nations to a study of the widespread influence of one important individual on his nation and beyond. The authors take different approaches, but all share the conviction that world history must take ecological process seriously and they all recognize the ways in which the living and non-living systems of the earth have influenced the course of human affairs. *Women in World History: v. 2: Readings from 1500 to the Present*

Sarah Shaver Hughes, Brady Hughes, 2015-04-29 This work is one of two volumes presenting selected histories from Asia Africa Europe and the Americas It discusses issues within a female context and features political and economic issues marriage practices motherhood and enslavement religious beliefs and spiritual development **Rubber Science** Yuko Ikeda, Atsushi Kato, Shinzo Kohjiya, Yukio Nakajima, 2024-07-16 In this second edition considering the increasing social concerns on sustainability the authors newly introduce an ingenious material design of rubber vulcanization along with outlining the reaction mechanism Novel characterization methods for rubber networks and filler structures are updated and the unique feature of rubber tires for modern and future sustainable society is described The contents of this book are of interest even for general readers who are concerned with environmental and sustainable issues on our Earth This book also provides an up to date text on rubber science and is a breakthrough among many rubber related publications Emphasis is placed on the most modern scientific approaches to rubber science departing from the usual detailed descriptions of trial and error results of traditional rubber technology This book is a good introduction to modern rubber science both for graduate students and for more or less experienced rubber engineers for updating their way of thinking in handling of technological problems
