Stedman-Edwards,Johanna Mang,2013-11-05 The world is losing species and biodiversity at an unprecedented rate The causes go deep and the losses are driven by a complex array of social economic political and biological factors at different levels Immediate causes such as over harvesting pollution and habitat change have been well studied but the socioeconomic factors driving people to degrade their environment are less well understood This book examines the underlying causes It provides analyses of a range of case studies from Brazil Cameroon China Danube River Basin India Mexico Pakistan Philippines Tanzania and Vietnam and integrates them into a new and interdisciplinary framework for understanding what is happening From these results the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends It makes a contribution to the understanding of all those from ecologists and conservationists to economists and policy makers working on one of the major challenges we face Rethinking Cancer Bernhard Strauss,Marta Bertolaso,Ingemar Ernberg,Mina J. Bissell,2025-09-09

Leading scientists argue for a new paradigm for cancer research proposing a complex systems view of cancer supported by

empirical evidence Current consensus in cancer research explains cancer as a disease caused by specific mutations in certain genes Thanks to dramatic advances in genome sequencing never before have we known so much about the individual cancer cell and yet it is still unclear how to use this knowledge for treatment success In this volume leading researchers argue for a new theory framework for understanding and treating cancer The contributors propose a complex systems view of cancer presenting conceptual building blocks for a new research paradigm supported by empirical evidence The contributors first discuss the new research framework in terms of theoretical foundations and then take up the relevance of a systems approach reviewing such topics as nonlinearity recurrence after treatment the cellular attractor concept network theory and noncoding DNA the dark matter of our genome They address the temporality of cancer progression drawing on evolutionary theory and clinical experience Finally they cover the dominant role of the tissue microenvironment in cancer analyzing topics including altered metabolic pathways the disease defining influence on metastasis and the interconnectedness of different environmental niches across levels of organization The Global Corporation Laura P. Hartman, Patricia H.

Werhane, 2013-12-19 This text brings together case studies focusing on specific instances of corporate best practices All too often we showcase cases based on questionable or unethical corporate behavior Instead the editors bring together in this book examples of how some firms got it right Certainly there is no claim that the companies in these cases are perfect some of them may have histories that include questionable practices But these are companies that work to foster trust both internally and in their relationships with customers suppliers shareholders and the communities in which they operate The book is not however merely a descriptive iteration of effective corporate conduct The editors conclude with an analysis of frameworks for corporate and managerial ethical decision making frameworks that help to establish models for best practices These frameworks then can be generalized and applied to other corporate situations and replicated by other companies in their search for excellence and the resulting avoidance of misconduct **Marine Protected Areas** John Humphreys, Robert
