Internet Multimedia Communications Using SIP Rogelio Martinez Perea, 2008-02-27 Session Initiation Protocol SIP was conceived in 1996 as a signaling protocol for inviting users to multimedia conferences With this development the next big Internet revolution silently started That was the revolution which would end up converting the Internet into a total communication system which would allow people to talk to each other see each other work collaboratively or send messages in real time Internet telephony and in general Internet multimedia is the new revolution today and SIP is the key protocol which allows this revolution to grow The book explains in tutorial fashion the underlying technologies that enable real time IP multimedia communication services in the Internet voice video presence instant messaging online picture sharing white boarding etc Focus is on session initiation protocol SIP but also covers session description protocol SDP Real time transport protocol RTP and message session relay protocol MSRP In addition it will also touch on other application related protocols and refer to the latest research work in IETF and 3GPP about these topics 3GPP stands for third generation partnership project which is a collaboration agreement between ETSI Europe ARIB TTC Japan CCSA China ATIS North America and TTA South Korea The book includes discussion of leading edge theory which is key to really understanding the technology accompanied by Java examples that illustrate the theoretical concepts

Throughout the book in addition to the code snippets the reader is guided to build a simple but functional IP soft phone therefore demonstrating the theory with practical examples This book covers IP multimedia from both a theoretical and practical point of view focusing on letting the reader understand the concepts and put them into practice using Java It includes lots of drawings protocol diagrams UML sequence diagrams and code snippets that allow the reader to rapidly understand the concepts Focus on HOW multimedia communications over the Internet works to allow readers to really understand and implement the technology Explains how SIP works including many programming examples so the reader can understand abstract concepts like SIP dialogs SIP transactions etc It is not focused on just VoIP It looks At a wide array of enhanced communication services related to SIP enabling the reader put this technology into practice Includes nearly 100 references to the latest standards and working group activities in the IETF bringing the reader completely up to date Provides a step by step tutorial on how to build a basic though functional IP soft phone allowing the reader to put concepts into practice For advanced readers the book also explains how to build a SIP proxy and a SIP registrar to enhance one s expertise and marketability in this fast moving area **IPTV and Internet Video** Wes Simpson,Howard
