Did Westward Subduction Cause Cretaceous-Tertiary Orogeny in the North American Cordillera? Robert S. Hildebrand, 2009-01-01

Within the Sonora segment to the south break off magmatism was also prevalent Both the Canadian and Sonoran segments have abundant porphyry copper mineralization temporally and spatially associated with the break off magmas which suggests a genetic link between slab failure and porphyry copper mineralization By 53 Ma eastwardly dipping subduction of Pacific Ocean crust was generating arc magmatism on the amalgamated Cordilleran collision zone in both the Canadian and Sonoran segments Oceanic schists such as the Orocopia Pelona Rand were formed in the ocean basin west of Rubia and accreted during initiation of the new easterly dipping subduction zone A major transform fault called the Phoenix fault connects the Sevier fold thrust belt at the California Nevada border with that in eastern Mexico and separates the Great Basin and Sonoran segments It juxtaposes the Sierra Mojave Sonora block alongside the Transition Zone of the Colorado Plateau Cordilleran events affected the subsequent development of western North America For example the structural Basin and Range Province appears to coincide with the region where exotic allochthons sit atop North American crust in both the

Great Basin and Sonoran segments Also within the triangular Columbia embayment large segments of Rubia appear to have escaped laterally during the Cordilleran orogeny to create a lithospheric hole that was later filled by basalt of the Columbia River and Modoc plateaux

Breeding Research on Aromatic and Medicinal Plants Christopher B Johnson, Chlodwig Franz, 2024-11-01 The field of medicinal aromatic plant breeding is growing and changing this resource will help you stay up to date In this essential book researchers from large and small laboratories and institutions throughout Europe and the Mediterranean region explore recent developments in the selection and breeding of aromatic and medicinal plants They take varied approaches from traditional breeding to the use of molecular markers and complement them with up to date information on biodiversity and resource conservation From the editors It is widely recognized that a strategy of conservation through use by which plant collection via wild harvesting is replaced by controlled cultivation is the best way forward if we are to balance human demands with the necessary conservation of the biodiversity represented by these species That provides one major driving force for research in this field Another concerns the very real need for improving the quality control of products on the market both to satisfy consumer demand and to conform with the justifiably increasing requirements for standardization and precise identification of the composition of the plant materials being sold for human use We hope that this volume will give readers a taste of the exciting developments in the field

Breeding Research on Aromatic and Medicinal Plants examines breeding for resistance and abiotic factors manipulating natural product accumulation through genetic engineering biochemical and molecular regulation of essential oil accumulation economic and legal considerations that breeders will encounter the ethical aspects of breeding these plants

Plant Systems Biology Sacha Baginsky, Alisdair R. Fernie, 2007-02-16 This volume aims to provide a timely view of the state of the art in systems biology The editors take the opportunity to define systems biology as they and the contributing authors see it and this will lay the groundwork for future studies The volume is well suited to both students and researchers interested in the methods of systems biology Although the focus is on plant systems biology the proposed material could be suitably applied to any organism

Environmental Engineering and Renewable Energy Renato Gvasci, Sarantuyaa Zandaryaa, 2012-12-02 This book contains the papers presented at the First International Conference on Environmental Engineering and Renewable Energy held in Ulaanbaatar Mongolia in September 1998 The main aim of the conference was to give an opportunity to scientists experts and researchers from different fields to convene and discuss environmental and energy problems and also be informed about the state of the art Today environmental protection is increasingly becoming a matter of global priority now that the tendency towards sustainable development is growing The main concept of sustainable development is to fulfill both the demand of today s generation and

cater for the requirements of future generations Hence sustainable development requires sound management of those environmental and research and development technologies which have low environmental impact and which promote the use of renewable sources Renewable energies are the only environmentally benign sources of energy and are available at any site and any time of the year Moreover the utilization of renewable sources of energy can contribute to the increasing energy demand and also advance the improvement of life standards in rural areas where it is difficult to establish a permanent connection with central electricity systems Application and adoption of emerging renewable energy technologies in rural and remote areas cannot be successful without transfer of knowledge information and know how Environmental engineering involves research and application of technologies to minimize the undesirable impact on the environment In recent years there has been a growing interest in environmental engineering problems in order to focus on theoretical and experimental studies on atmospheric pollution water management and treatment waste treatment disposal and management
