Science With Young Children:

Experiences in Science for Young Children Donald Neuman,1992 This text gives hands on instruction on how to get 3 5 year olds involved in science education **Science Everywhere** Barbara J. Taylor,1993 Grade level K 1 p t

Investigating Science With Young Children Rosemary Althouse,1988 Teaching science to young children has long been an area of intense interest and concern to educators Investigating Science with Young Children is specifically designed to address this concern in a practical timely and enjoyable way Originally planned as an extension of the ten booklet series Science Experiences for Young Children Teachers College Press 1975 this book outlines 85 lively activities the teacher can use in guiding three four and five year olds in a fruitful exploration of science The first part of the book presents a theoretical explanation of the process approach advocated by the author the second the activities themselves Exploring Water Mixing Colors Setting Objects in Motion to name a few Investigating Science with Young Children offers an informed guide to resources necessary to implement an effective and productive science program The book will help teachers fully understand the process approach and encourage them to develop their own science activities for the classroom As the author states It is not enough to read about process science you must use it to find out how much children enjoy and learn from this method This book will serve as a supplemental text for early childhood and primary science curriculum courses and as an invaluable resource for teachers There is much of value here School Science Mathematics Teaching science by a process approach is an exciting adventure for both teachers and children There is neither a predetermined sequence of events for children nor a specific set of directions for the teacher Process science is an open ended approach and the direction learning will take is determined for the most part by the children From the Preface *Children's Ways with Science and Literacy* Maria Varelas,Christine C. Pappas,2013-05-07 Science is often a forgotten subject in early elementary grades as various mandates require teachers to focus on teaching young students to achieve specific reading and mathematical competencies This book offers specific examples and empirical evidence of how integrated science literacy curriculum and teaching in urban primary grade classrooms give students opportunities to learn science and to develop positive images of themselves as scientists The Integrated Science Literacy Enactments ISLE approach builds on multimodal multidimensional and dialogically oriented teaching and learning principles Readers see how as children engage with texts material objects dialogue ideas and symbols in their classroom community they are helped to bridge their own understandings and ways with words and images with those of science In doing so they become learners of both science and literacy The book features both researcher and teacher perspectives It explores science learning and its intersection with literacy development in schools that educate predominately children of color many of whom struggle with poverty and have been traditionally underestimated underserved and underrated in science classrooms In all these ways this volume is a significant contribution to a critically under researched area of science education Exploring Science with Young Children Terry Russell,Linda

McGuigan,2016-03-16 The Association for Science Education Book Award 2016 Finalist Science in the early years is about more than developing understanding of key scientific concepts it is about encouraging imagination creativity and curiosity and nurturing key scientific skills to form a firm base for learning Understanding how best to do this for young children aged 3 7 is the focus of the book By concentrating on practical and naturally occurring experiences the authors look at meeting the needs of the curriculum with children at the centre of their own learning Chapters look at how to work with children to Find out and develop their own ideas Get them inquiring scientifically Use evidence to support their views This book will really help develop the whole child across the curriculum and make sure they have the skills they need for later learning *Start Young!* Shannan McNair,2006 You asked for it now you ve got it In a focus group at a recent NSTA convention teachers of prekindergarten through second grade clamored for help They do want easy to do science activities they can use for everyday teaching But they don t want to be forced to adapt material meant for older children So here s the solution Start Young offers a wealth of simple educational activities designed to use right away with even the littlest scientists The book includes a chapter of helpful background on the latest thinking about effective ways to introduce science in early childhood But the bulk of the book is two dozen articles compiled from Science Children NSTA s award winning journal for elementary school teachers Research in Early Childhood Science Education Kathy Cabe Trundle,Mesut Saçkes,2015-04-15 This book emphasizes the significance of teaching science in early childhood classrooms reviews the research on what young children are likely to know about science and provides key points on effectively teaching science to young children Science education an integral part of national and state standards for early childhood classrooms encompasses not only content based instruction but also process skills creativity experimentation and problem solving By introducing science in developmentally appropriate ways we can support young children s sensory explorations of their world and provide them with foundational knowledge and skills for lifelong science learning as well as an appreciation of nature This book emphasizes the significance of teaching science in early childhood classrooms reviews the research on what young children are likely to know about science and provides key points on effectively teaching young children science Common research methods used in the reviewed studies are identified methodological concerns are discussed and methodological and theoretical advances are suggested **Starting with Science** Marcia Talhelm Edson,2013 Young children arrive at school with unrestrained curiosity and wonder about the world A fact based hands on activity approach to teaching science however is not enough to help them deepen their scientific thinking or discoveries In Starting with Science Strategies for Introducing Young Children to Inquiry Marcia Talhelm Edson explores the big ideas surrounding inquiry based science she helps teachers thoughtfully plan for and implement a conceptual approach to teaching and learning science so students can engage in observation questioning predictions collaboration data collection and a deeper understanding of topics important to their lives Through numerous examples from classroom discussions teacher commentary and children s work samples Starting with Science

provides practical suggestions and models for beginning teachers as well as those who are fine tuning their practice Four key questions underlie the book What is inquiry based science How can pre K kindergarten and primary grade teachers incorporate inquiry based science when faced with limited science background insufficient time and lack of resources What roles do the children the teacher and the environment play in an inquiry based science program What instructional strategies are effective in implementing inquiry based science In answering these questions Edson provides a framework from which teachers can devise their own in depth inquiry investigations based on district requirements and students own interests She also integrates literacy opportunities as well as explicit suggestions for effective assessment of inquiry based science Starting with Science shows us what inquiry looks like in an early childhood classroom and introduces strategies teachers can employ to confidently and competently teach science to students in grades pre K 2 Children will gain skills for problem solving and an attitude about learning that they will carry with them not just to the next grade but throughout their lives [More](#)
