Berul,Jeffrey A. Towbin,2012-12-06 The molecular basis for atrial fibrillation continues to be largely unknown and therapy remains unchanged aimed at controlling the heart rate and preventing systemic emboli with anticoagulation Familial atrial fibrillation is more common than previously suspected While atrial fibrillation is commonly associated with acquired heart disease a significant proportion of individuals have early onset without other forms of heart disease referred to as lone atrial fibrillators

It is also well recognized that atrial fibrillation occurs on a reversible or functional basis without associated structural heart disease such as with hyperthyroidism or of atrial fibrillation following surgery It remains to be determined what percentage in these individuals is familial or due to a genetic predisposition Mapping the locus for familial atrial fibrillation is the first step towards the identification of the gene Isolation of the gene and subsequent identification of the responsible molecular genetic defect should provide a point of entry into the mechanism responsible for the familial form and the common acquired forms of the disease and eventually provide more effective therapy We know that the ionic currents responsible for the action potential of the atrium is due to multiple channel proteins as is electrical conduction throughout the atria Analogous to the ongoing genetic studies in patients with familial long QT syndrome it is highly likely that defects in each of these channel proteins will be manifested in familial atrial fibrillation

**Principles of Molecular Regulation** P. Michael Conn, Anthony R. Means, 2000-07-28 With the dramatic growth in our knowledge of hormone action and the mechanisms of cell regulation the need for an up to date broad ranging survey of these processes has become pressing In Principles of Molecular Regulation P Michael Conn and Anthony Means have successfully assembled a panel of leading investigators to provide an integrated review of the key areas membrane receptor initiated cell signaling and nuclear receptor initiated gene regulation Chosen for the excellence of their research as well as their demonstrated writing skills these distinguished authors illuminate the molecular machinery underlying the regulatory processes of cells In addition to their comprehensive review of the signaling mechanisms involving cell surface receptors nuclear receptors and ion channels they detail the roles of calcium lipids cyclic AMP protein kinases and protein phosphatases They also discuss the molecular regulation of cell proliferation and death as well as the impact of new technologies on rational drug discovery Capturing the excitement now present at this vibrant union of molecular biology cell biology and endocrinology Principles of Molecular Regulation constitutes a major new resource for understanding the many and complex elements of biological regulation Its up to date critical synthesis is certain to prove of high value to all basic and clinical investigators working with these processes today
