

A close-up photograph of a person's hands wearing blue nitrile gloves. The hands are holding a clear plastic multi-well plate, which contains rows of small, round wells filled with a red liquid. The plate is tilted slightly. In the foreground, a white petri dish is partially visible, containing a clear, colorless liquid. The background is blurred, showing more of the person's hands and the lab environment. The overall lighting is bright and clinical.

Research Misconduct as White-Collar Crime Rita Faria, 2018-09-20 This book explores the subject of research misconduct its definition what behaviours should fall under its label and the types of preventive and repressive procedures that should be put to practice to combat it Adopting a criminological perspective Faria views research misconduct as a locus of analysis for corporate and white collar crime Based upon an empirical study involving in depth interviews and documentary analysis this original research offers an interesting approach to an age old problem which is growing ever more important The commodification of research together with perceived risks of research misconduct is opening the way to ambiguous and ineffective forms of social control over scholars affecting their commitment to research integrity and the responsible conduct of research Despite this however little consensus around the phenomenon exists Seeking to counter this Faria opens up the discussion on the potential social harms arising from the current state of affairs and argues that that criminology should task itself with understanding and researching the pressing topic of research misconduct including fabrication falsification and plagiarism as well as questionable research practices

University Responsibility for the Adjudication of Research Misconduct Stefan Franzen, 2021-05-12 This book offers a scientific whistleblower s perspective on current implementation of federal research misconduct regulations It provides a narrative of general interest that relates current cases of research ethics to philosophical historical and sociological accounts of fraud in scientific research The evidence presented suggests that the problems of falsification and fabrication remain as great as ever but hidden because the current system puts universities in charge of investigations and permits them to use confidentiality regulations to hide the outcomes of investigations The book documents the significant conflict of interest that arises because federal regulation gives universities the responsibility to conduct investigations of their own faculty with severely limited oversight The book is intended for young research scientists or anyone who wishes to understand the challenges faced by scientists in the workplace today The central thread in the book is an exclusive account of an experienced research scientist who was the first to expose the facts that led to the longest running research misconduct investigation in the history of the National Science Foundation
