

Socialized Knowledge, Values and Scientific Objectivity

Traditional accounts of scientific knowledge often oppose the involvement of values in scientific practices. Their arguments usually revolve around the idea that values can impair the objectivity of science and prevent it from reaching its goal. However, Helen E. Longino (2004) argues that the ideal of a value-free science is possible neither practically nor in principle. She then goes on to show through her social account of knowledge that values can in fact help realize the scientific agenda. I agree with Longino that her overall account not only provides us with a new philosophical conception of science in place of the value-free ideal, but its recognition and appreciation can also improve the fruitfulness of scientific activities.

Longino's rejection of the value-free ideal and her conception of a social account of knowledge begins with an analysis of the underdetermination problem. The underdetermination thesis as classically understood is that empirical data does not determine one unique scientific theory to explain the data, but there could be multiple theories that are empirically equivalent but inconsistent among themselves. This is different from the problem of induction as the latter has to do with "a generalization and its instances", whereas the former applies to theoretical statements that are neither a mere generalization of the data nor identical to observation statements in terms of their content (Longino 2002, 125). A very simplistic example is the following: Imagine that we have given some mathematical and geometric puzzles to 1000 male and 1000 female individuals around the age of 45 from different districts of Istanbul, and the results show that the males scored slightly higher than the females. If we link this data to the theory that the average male is likely to score higher than the average female on mathematical and geometric puzzles, then we will have a problem of induction. But if we come up with the theories that (T1) the result of our test stems from the difference between the nurturing and education of males and females, or (T2) the result of

Scientific Knowledge Socialized:

Cognitive Semantics and Scientific Knowledge András Kertész, 2004-01-01 The book focuses on the question of how and to what extent cognitive semantic approaches can contribute to the new field of the cognitive science of science The argumentation is based on a series of instructive case studies which are intended to test the prospects and limits of the metascientific application of both holistic and modular cognitive semantics The case studies show that while cognitive semantic research is able to solve problems which have traditionally been the domain of the philosophy of science it also encounters serious limits The prospects and the limits thus revealed suggest new research topics which in future can be tackled by cognitive semantic approaches to the cognitive science of science

Socializing Epistemology Frederick F. Schmitt, 1994 In this wide ranging collection of never before published essays distinguished scholars in the fields of philosophy and economics examine such questions as whether testimony is a basic source of knowledge the degree to which notions of a good argument are determined by speakers and their audiences the role of individual biases in the development of science and the social aspects of group belief and group justification The collection ends with the first comprehensive bibliography of social epistemology

Theory and Practice in the Interdisciplinary Production and Reproduction of Scientific Knowledge Olga Pombo, Klaus Gärtner, Jorge Jesuino, 2023-01-10 This book addresses the urgent need for a large and systematic analysis of current interdisciplinary ID research and practice It demonstrates how ID is essentially a cognitive phenomenon something different from the frivolous and inconsequential attempt of trying to overcome the disciplinary competencies and exigencies By ID the authors show that it is a manifestation of the transversal rationality that underlies current scientific activity It is the very progress of specialized disciplines that requires interdisciplinary new research practices and new forms of articulation between domains something that has a strong impact on the traditional disciplinary structure of scientific and educational institutions Divided into two parts the book presents a conceptual framework as well as several case studies on ID practices The book aims at covering three main themes It contributes to the stabilization of ID meaning and characterizes the main ID theorizations which have been proposed until now It builds an innovative and broad understanding of the several ID determinations as an essentially cognitive phenomenon and of its institutional implications at the level of disciplinary structures and curricular organization Finally it distinguishes and maps the diversity of ID procedures and practices which are being used and tested by contemporary scientific and educational institutions This book is addressed to philosophers scientists and every one interested in science production and reproduction including science teaching

Constructivism in Science Education Michael Matthews, 2012-12-06 Constructivism is one of the most influential theories in contemporary education and learning theory It has had great influence in science education The papers in this collection represent arguably the most sustained examination of the theoretical and philosophical foundations of constructivism yet published Topics covered include orthodox

epistemology and the philosophical traditions of constructivism the relationship of epistemology to learning theory the connection between philosophy and pedagogy in constructivist practice the difference between radical and social constructivism and an appraisal of their epistemology the strengths and weaknesses of the Strong Programme in the sociology of science and implications for science education The book contains an extensive bibliography Contributors include philosophers of science philosophers of education science educators and cognitive scientists The book is noteworthy for bringing this diverse range of disciplines together in the examination of a central educational topic *Advances in Human Factors in Training, Education, and Learning Sciences* Terence Andre, 2017-06-22 This book focuses on the importance of human factors in optimizing the learning and training process It reports on the latest research and best practices and discusses key principles of behavioral and cognitive science which are extremely relevant to the design of instructional content and new technologies to support mobile and multimedia learning virtual training and web based learning among others as well as performance measurements social and adaptive learning and many other types of educational technologies with a special emphasis on those important in the corporate higher education and military training contexts Based on the AHFE 2017 Conference on Human Factors in Training Education and Learning Sciences held July 17-21 2017 in Los Angeles California the book offers a timely perspective on the role of human factors in education It highlights important new ideas and will foster new discussions on how to optimally design learning experiences **Science and Modernity** S.

Lelas, 2012-12-06 Science is a multifaceted natural and historical phenomenon It consists of five elements that is it happens in five distinct media biological linguistic technological social and historical None of these alone provides an indubitable basis for the truth of scientific knowledge but combined together they compose a solid ground for our trust in its reliability The composition however is uniquely related to our modern mode of living Science did not exist before modernity and it will cease to exist in this form if our way of life should change The book presents a thorough analysis of all these dimensions and their relations and thus lays the path for an integral theory of science Because of this it can be used as a textbook for general courses in the theory of science at both the undergraduate and graduate level **Kuhn's Legacy** Bojana

Mladenović, 2017-09-05 Thomas Kuhn's *The Structure of Scientific Revolutions* is one of the most important books of the twentieth century Its influence reaches far beyond the philosophy of science and its key terms such as paradigm shift normal science and incommensurability are now used in both academic and public discourse without any reference to Kuhn However Kuhn's philosophy is still often misunderstood and underappreciated In *Kuhn's Legacy* Bojana Mladenović offers a novel analysis of Kuhn's central philosophical project focusing on his writings after *Structure* Mladenović argues that Kuhn's historicism was always coupled with a firm and consistent antirelativism but that it was only in his mature writings that Kuhn began to systematically develop an original account of scientific rationality She reconstructs this account arguing that Kuhn sees the rationality of science as a form of collective rationality At the purely formal level Kuhn's conception of scientific

rationality prohibits obviously irrational beliefs and choices and requires reason responsiveness as well as the uninterrupted pursuit of inquiry At the substantive historicized level it rests on a distinctly pragmatist mode of justification compatible with a notion of contingent but robust scientific progress Mladenovi argues that Kuhn s epistemology and his metaphilosophy both represent a creative and fruitful continuation of the tradition of American pragmatism Kuhn s Legacy demonstrates the vitality of Kuhn s philosophical project and its importance for the study of the philosophy and history of science today

Socializing Development Leon Valentin Schettler,2020-03-03 As Multilateral Development Banks increasingly gained influence in shaping global development transnational social movements pushed to hold them accountable for their human rights impact towards communities Leon Valentin Schettler presents a novel causal mechanism of movement advocacy towards MDBs combining disruptive and conventional tactics Systematically comparing the evolution of human rights standards and complaint mechanisms over the last three decades he reveals how the combination of 1 declining US hegemony 2 counter mobilization by China and 3 movement cooptation by the World Bank bureaucracy led to a dilution of human rights accountability in the 2010s Academic Socialization of Young Black and Latino Children Susan Sonnenschein,Brook E. Sawyer,2018-12-11 This book offers a strengths based family focused approach to improving the educational performance and school experience of struggling Black and Latino students The book discusses educational challenges faced by low income families of color and the different strengths within Black and Latino family life that can affect these challenges It focuses building on these strengths within the children s home environments that can serve as a foundation for subsequent learning The chapters describe a wide range of family practices and beliefs including development of interventions to support families that promote early language and literacy early mathematics and social skills The chapters also present quantitative and or qualitative studies using a strengths based approach to parents socialization of their children s early academic skills Topics featured in this book include Latino and Black parental resources investments and beliefs Academic socialization in the homes of Black and Latino preschool children Development of culturally informed interventions to promote children s school readiness skills Family school partnerships as a tool for improving educational opportunities Directions for future research Academic Socialization of Young Black and Latino Children is a must have resource for researchers educators clinicians and related professionals and graduate students in diverse fields including education developmental and school psychology family studies counseling psychology and social work and sociology of culture
