Research Methods in Urban and Regional Planning Xinhao Wang, Rainer Hofe, 2008-09-02 Urban and regional planners develop and evaluate plans for communities; the places we live, work, interact and entertain on a daily basis. Their responsibilities require skills of retrieving, analyzing and presenting data. One of the required courses in all planning programs is planning methods. While teaching such a course, we feel the need for a text book that provides an up to date introduction to the fundamental methods related to planning and human services delivery. In specific, this book describes methods used in four areas: demographic analysis, economic analysis, land use analysis and transportation analysis. Many people have been helpful and supportive throughout this endeavor. Up front are our families who understood and supported us during the period. Andrea Yang, Rainer's wife and also a planner, edited various chapters. David Edelman and Wolfgang Preiser provided suggestions for the content of this book and excellent insights and guidance whenever we asked for. We are grateful for the release time that David Edelman, the School Director, gave us on behalf of the entire School of Planning faculty. We would like to thank Dr. Stefan Rayer, Dr. Chen Ping Yang and Dr. Zhongren Peng who took time from their busy schedule to review various chapters. Dr. Rayman Mohamed used some preliminary chapters in his planning methods class and gave us valuable feedback. Their comments and suggestions significantly improved the book.

Applied Urban Analysis Ian Cullen, 2013-04-15 Much of the theoretical literature in planning and human geography at present is materialist in perspective This offers a powerful critique but locates the dynamics of urban systems too specifically in just one basic social relationship It fails to provide an intellectual base broad enough for constructive detailed urban analysis partly because it fails to do justice to the reflective awareness of the individual The alternative humanist position redresses the balance in favour of the individual but again cannot serve the practical requirements of urban analysis since it so often ignores social or contextual analysis Ian Cullen synthesizes these two apparently inconsistent theoretical positions and to render the increasingly obscure debate between them accessible This book was first published in 1984
