Scientific Theory and Religion Ernest William Barnes,1933      Scientific Theory and Religion, the World Described by Science and Its Spiritual Interpretation, by Ernest William Barnes, ... Ernest William Barnes,1933      **Scientific Theory and Religion** Ernest William Barnes,1933      Scientific Theory and Religion Ernest William Barnes (Bishop of Birmingham),1933

**Matter and Spirit in the Universe** Helge Kragh,2004 Cosmology is an unusual science with an unusual history This book examines the formative years of modern cosmology from the perspective of its interaction with religious thought As the first study of its kind it reveals how closely associated the development of cosmology has been with considerations of a philosophical and religious nature From nineteenth century thermodynamics to the pioneering cosmological works of Georges Lema tre and Arthur E Milne religion has shaped parts of modern cosmological theory By taking the religious component seriously a new and richer history of cosmology emerges

**Reconciling Science and Religion** Peter J. Bowler,2014-04 Although much has been written about the vigorous debates over science and religion in the Victorian era little attention has been paid to their continuing importance in early twentieth century Britain Reconciling Science and Religion provides a comprehensive survey of the interplay between British science and religion from the late nineteenth century to World War II Peter J Bowler argues that unlike the United States where a strong fundamentalist opposition to evolutionism developed in the 1920s most famously expressed in the Scopes monkey trial of 1925 in Britain there was a concerted effort to reconcile science and religion Intellectually conservative scientists championed the reconciliation and were supported by liberal theologians in the Free Churches and the Church of England especially the Anglican Modernists Popular writers such as Julian Huxley and George Bernard Shaw sought to create a non Christian religion similar in some respects to the Modernist position Younger scientists and secularists including Rationalists such as H G Wells and the Marxists tended to oppose these efforts as did conservative Christians who saw the liberal position as a betrayal of the true spirit of their religion With the increased social tensions of the 1930s as the churches moved toward a neo orthodoxy unfriendly to natural theology and biologists adopted the Modern Synthesis of genetics and evolutionary theory the proposed reconciliation fell apart Because the tensions between science and religion and efforts at reconciling the two are still very much with us today Bowler s book will be important for everyone interested in these issues

**Science, Religion, and the Search for Extraterrestrial Intelligence** David Wilkinson,2013-08-01 If the discovery of life elsewhere in the universe is just around the corner what would be the consequences for religion Would it represent another major conflict between science and religion even leading to the death of faith Some would suggest that the discovery of any suggestion of extraterrestrial life would have a greater impact than even the Copernican and Darwinian revolutions It is now over 50 years since the first modern scientific papers were published on the search for extraterrestrial intelligence SETI Yet the religious implications of this search and possible discovery have never been systematically addressed in the scientific or theological

arena SETI is now entering its most important era of scientific development New observation techniques are leading to the discovery of extra solar planets daily and the Kepler mission has already collected over 1000 planetary candidates This deluge of data is transforming the scientific and popular view of the existence of extraterrestrial intelligence Earth like planets outside of our solar system can now be identified and searched for signs of life Now is a crucial time to assess the scientific and theological questions behind this search This book sets out the scientific arguments undergirding SETI with particular attention to the uncertainties in arguments and the strength of the data already assembled It assesses not only the discovery of planets but other areas such as the Fermi paradox the origin and evolution of intelligent life and current SETI strategies In all of this it reflects on how these questions are shaped by history and pop culture and their relationship with religion especially Christian theology It is argued that theologians need to take seriously SETI and to examine some central doctrines such as creation incarnation revelation and salvation in the light of the possibility of extraterrestrial life

**Wittgenstein's Whewell's Court Lectures** Yorick Smythies, 2017-04-05 Wittgenstein's Whewell's Court Lectures contains previously unpublished notes from lectures given by Ludwig Wittgenstein between 1938 and 1941 The volume offers new insight into the development of Wittgenstein's thought and includes some of the finest examples of Wittgenstein's lectures in regard to both content and reliability Many notes in this text refer to lectures from which no other detailed notes survive offering new contexts to Wittgenstein's examples and metaphors and providing a more thorough and systematic treatment of many topics Each set of notes is accompanied by an editorial introduction a physical description and dating of the notes and a summary of their relation to Wittgenstein's Nachlass Offers new insight into the development of Wittgenstein's ideas in particular his ideas about certainty and concept formation The lectures include more than 70 illustrations of blackboard drawings which underline the importance of visual thought in Wittgenstein's approach to philosophy Challenges the dating of some already published lecture notes including the Lectures on Freedom of the Will and the Lectures on Religious Belief

**Eminent Lives in Twentieth-century Science & Religion** Nicolaas A. Rupke, 2009 Can science and religion coexist in harmony Or is conflict inevitable In this volume an international team of distinguished scholars addresses these enduring yet urgent questions by examining the lives of thirteen eminent twentieth century scientists whose careers were marked by the interaction of science and religion Rachel Carson Charles A Coulson Theodosius Dobzhansky Arthur S Eddington Albert Einstein Ronald A Fisher Julian Huxley Pascual Jordan Robert A Millikan Ivan P Pavlov Michael I Pupin Abdus Salam and Edward O Wilson The richly empirical studies show a diversity of creative engagements between science and religion that defy efforts to set the two at odds

**Psychology, Religion, and the Nature of the Soul** Graham Richards, 2011-06-02 Neither a book about the psychology of spirituality nor America's ongoing turf wars between religion and science Psychology Religion and the Nature of the Soul takes to task many of the presumed relationships between the two from sharing common concerns to diametrically hostile opposites to analyze the myriad functions religion and psychology

play in our understanding of the human life and mind Graham Richards takes the historical and philosophical long view in these rigorous and readable essays which trace three long running and potentially outmoded threads that psychology and religion are irrelevant to each other that they are complementary and should collaborate and that one will eventually replace the other He references a stunning variety of texts from Freud and Allport to Karen Armstrong and Paul Tillich reflecting the evolution of these ideas over the decades to emphasize both the complexity of the issues and the enduring lack of easy answers The eloquence of the writing and passionate objectivity of the argument will interest readers on all sides of the debate as the author examines the religious origins of psychology the original dichotomy mythos versus logos the authenticity of religious experience Religion and personality the problematic role of prayer and Religion in the history of psychotherapy For those making a serious study of the history of psychology Psychology Religion and the Nature of the Soul will inspire a fresh wave of critical discussion and inquiry
