Scientific Conversations Interviews With The New York Times:

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Scientific Conversations Claudia Dreifus, 2002-11-01 In these thirty eight interviews originally published in the weekly Science Times section of The New York Times Claudia Dreifus brings all of her colorful personality to bear on her subjects as well as an arsenal of philosophy literature and current events and an unmistakable curiosity As each

conversation unfolds we learn surprising and fascinating things about some of the most intriguing figures and issues in science today Dreifus's outsider status in the world of science is perhaps one of her greatest interviewing strengths A political journalist for much of her career she stumbled into a position at the Science Times section With little more scientific background than the average person she scrambled to prepare for her meetings with some of the greatest minds in a broad range of disciplines from astronomy to geology from biology and medicine to computer science and mathematics She soon found herself in a refreshingly candid environment so unlike the one she had known on the political beat It is from this perspective that she makes science tangible accessible and entertaining

Avenging Nature Eduardo Valls Oyarzun, Rebeca Gualberto Valverde, Noelia Malla

Garcia, María Colom Jiménez, Rebeca Cordero Sánchez, 2020-09-28 Nature thou art my goddess Edmund's bold assertion in King Lear could easily inspire and at the same time function as a lamentation of the inadequate respect of nature in culture In this volume international experts provide multidisciplinary exploration of the insubordinate representations of nature in modern and contemporary literature and art The work foregrounds the need to reassess how nature is already and has been for a while striking back against human domination From the perspective of literary studies art history media studies ethics and philosophy and ethnology and anthropology Avenging Nature highlights the need of assessing insurgent discourses that converging with counter discourses of race gender or class realize the empowerment of nature from its subaltern position Acknowledging the argument that cultural representations of nature establish a relationship of domination and exploitation

of human discourse over nonhuman reality and that in consequence our regard for nature as humanist critics is instrumental and anthropocentric the present volume advocates for the view that the time has come to finally perceive nature's vengeance and to critically probe into nature's ongoing revenge against the exploitation of culture *Thinking Like a Political Scientist* Christopher Howard, 2022-12-22 A compelling case for transforming how research methods are taught to undergraduate students of political science London School of Economics Review of Books Each year tens of thousands of students who are interested in politics go through a rite of passage they take a course in research methods Many find the subject to be boring or confusing and with good reason Most of the standard books on research methods fail to highlight the most important concepts and questions Instead they brim with dry technical definitions and focus heavily on statistical analysis slighting other valuable methods This approach prevents students from mastering the skills they need to engage more directly and meaningfully with a wide variety of research With wit and practical wisdom Christopher Howard draws on more than a decade of experience teaching research methods to transform a typically dreary subject and teach budding political scientists the critical skills they need to read published research more effectively and produce better research of their own The first part of the book is devoted to asking three fundamental questions in political science What happened Why Who cares In the second section Howard demonstrates how to answer these questions by choosing an appropriate research design selecting cases and working with numbers and written documents as evidence Drawing on examples from American and comparative politics international relations and public policy *Thinking Like a Political Scientist* highlights the most common challenges that political scientists routinely face and each chapter concludes with exercises so that students can practice dealing with those challenges *Stories for Chip* Nisi Shawl, 2015-08-03 *Stories for Chip* brings together outstanding authors inspired by a brilliant writer and critic Science Fiction Writers of America Grandmaster Samuel R Chip Delany Award winning SF luminaries such as Michael Swanwick Nalo Hopkinson and Eileen Gunn contribute original fiction and creative nonfiction From surrealistic visions of bucolic road trips to erotic transgressions to mind expanding analyses of Delany's influence on the genre as an out gay man an African American and possessor of a startlingly acute intellect this book conveys the scope of the subject's sometimes troubling always rewarding genius Editors Nisi Shawl and Bill Campbell have given Delany and the world at large a gorgeous haunting illuminating and deeply satisfying gift of a book *Bulletin of the Atomic Scientists*, 1994-05 *Universities and Their Leadership* William G. Bowen, Harold T. Shapiro, 2016-06-28 On the occasion of the 250th anniversary of Princeton University leading educators and commentators participated in a symposium jointly sponsored by Princeton and The Andrew W Mellon Foundation *Universities and Their Leadership* is a collection of original essays from presenters at the Princeton Conference on Higher Education Individually these essays discuss aspects of contemporary higher education in the U S Taken together they offer a useful perspective on issues that face American universities as they enter the twenty first century The opening essay *The University and Its Critics* by Frank Rhodes confronts criticisms of the

American university examines how universities have changed over recent decades and suggests a plan of action to restore public confidence and strengthen bonds of community within universities On the Accountability of Higher Education in the United States by Martin Trow deals with the critical issue of responsibility Harold Shapiro s essay University Presidents Then and Now blends personal insights with a historical account of changes over time in the roles of university presidents In commenting on Shapiro s paper Hanna Gray draws on her experiences as a university president and her training as a historian to demonstrate that university presidents have always operated under constraints Henry Rosovsky and Inge Lise Ameer collaborate in the essay A Neglected Topic Professional Conduct of College and University Teachers to which Amy Gutmann responds in an essay entitled How Can Universities Teach Professional Ethics Oliver Fulton contributes a cross cultural perspective in Unity or Fragmentation Convergence or Diversity The Academic Profession in Comparative Perspective in the Era of Mass Higher Education Daniel J Kevles s essay A Time for Audacity What the Past Has to Teach the Present about Science and the Federal Government considers the historical partnership between the scientific community and the government In reaction Frank Press in New Policies for New Times comments on the shifting actions of major political parties in supporting research and Maxine Singer in her essay On the Future of America s Scientific Enterprise surveys opportunities and problems that have been created by recent scientific advances British Scientists and the Manhattan Project Ferenc Morton Szasz,1992-06-18 During World War II Franklin D Roosevelt and Winston Churchill pooled their nations resources in the race to beat the Germans to the secret of the atomic bomb This book tells the story of the British scientists who journeyed to Los Alamos to help develop the world s first nuclear weapons
