

What role do scientists play in science journalism?

The ability of journalists to report science news is directly reliant on the scientific community to publish it. The press can be manipulated by scientists who wish to trumpet their particular subject of study, but the press can also manipulate scientists to support media objectives. Both parties are responsible for ensuring the accuracy and neutrality of science news.

Scientists and Journalists Sharon M. Friedman, Sharon Dunwoody, Carol L. Rogers, 1986 *Communicating Uncertainty* Sharon M. Friedman, Sharon Dunwoody, Carol L. Rogers, 2012-10-12 Exploring the interactions that swirl around scientific uncertainty and its coverage by the mass media this volume breaks new ground by looking at these issues from three different perspectives that of communication scholars who have studied uncertainty in a number of ways that of science journalists who have covered these issues and that of scientists who have been actively involved in researching uncertain science and talking to reporters about it In particular *Communicating Uncertainty* examines how well the mass media convey to the public the complexities ambiguities and controversies that are part of scientific uncertainty In addition to its new approach to scientific uncertainty and mass media interactions this book distinguishes itself in the quality of work it assembles by some of the best known science communication scholars in the world This volume continues the exploration of interactions between scientists and journalists that the three coeditors first documented in their highly successful volume *Scientists and Journalists Reporting Science as News* which was used for many years as a text in science journalism courses around the world *A Scientist's Guide to Talking with the Media* Richard Hayes, Daniel Grossman, 2006 In *A Scientist's Guide to Talking with the Media* Richard Hayes and Daniel Grossman draw on their expertise in public relations and journalism to empower researchers in a variety of fields to spread their message on their own terms The authors provide tips on how to translate abstract concepts into concrete metaphors craft soundbites and prepare for interviews For those looking for a higher profile the authors explain how to become a reporter's trusted source the first card in the Rolodex on controversial issues *Encyclopedia of Literature and Science* Pamela Gossin, 2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they're different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A-Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief bibliography The entire volume closes with a list of works for further reading *Journalism, Science and Society* Martin W.

Bauer, Massimiano Bucchi, 2008-07-25 Analyzing the role of journalists in science communication this book presents a perspective on how this is going to evolve in the twenty first century The book takes three distinct perspectives on this interesting subject Firstly science journalists reflect on their operating rules science news values and news making routines Secondly a brief history of science journalism puts things into context characterising the changing output of science writing in newspapers over time Finally the book invites several international journalists or communication scholars to comment on these observations thereby opening the global perspective This unique project will interest a range of readers including science communication students media studies scholars professionals working in science communication and journalists

Communicating Science Eileen Scanlon, 1999 Communicating Science is an ideal introduction for anyone who wants to learn about the relationship between science the media and the public *Science Communication for Scientists* Laura Lindenfeld, John C. Besley, Xia Zheng, Anthony Dudo, Todd P. Newman, 2025-10-09 Grounded in strategic thinking and social science research this textbook empowers students to confidently navigate skillful and effective science communication Developed by leading science health and risk communication scholars the book provides a clear research informed approach to communicating with audiences across the scientific community and broader society Readers explore how to put theory into practice through classroom tested activities international real world examples and thoughtful practice oriented assignments These tools help students to create audience centered communication strategies build habits of ethical and intentional engagement and engage with a wide range of audiences ultimately developing greater alignment between science and society It prepares students to be more effective communicators and works to define science communication education by integrating practice with evidence and reflection This text is ideal for graduate and upper level undergraduate courses especially in Science Technology Engineering and Math fields and is an essential resource for the next generation of science communicators Online resources such as training activities further reading videos and a test bank are available at www.routledge.com/9781032797335 The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license Routledge Handbook of Public Communication of Science and Technology Massimiano Bucchi, Brian Trench, 2014-06-20 Communicating science and technology is a high priority of many research and policy institutions a concern of many other private and public bodies and an established subject of training and education Over the past few decades the field has developed and expanded significantly both in terms of professional practice and in terms of research and reflection The Routledge Handbook of Public Communication of Science and Technology provides a state of the art review of this fast growing and increasingly important area through an examination of the research on the main actors issues and arenas involved In this brand new revised edition the book brings the reviews up to date and deepens the analysis As well as substantial reworking of many chapters it gives more attention to digital media and the global aspects of science communication with the inclusion of four new chapters

Several new contributors are added to leading mass communication scholars sociologists public relations practitioners science writers and others featured herein With key questions for further discussion highlighted in each chapter the handbook is a student friendly resource and its scope and expert contributors mean it is also ideal for both practitioners and professionals working in the field Combining the perspectives of different disciplines and of different geographical and cultural contexts this original text provides an interdisciplinary and global approach to the public communication of science and technology It is a valuable resource for students researchers educators and professionals in media and journalism sociology the history of science and science and technology

Handbook of Public Communication of Science and Technology Massimiano Bucchi, Brian Trench, 2008-06-03 Comprehensive yet accessible this key Handbook provides an up to date overview of the fast growing and increasingly important area of public communication of science and technology from both research and practical perspectives As well as introducing the main issues arenas and professional perspectives involved it presents the findings of earlier research and the conclusions previously drawn Unlike most existing books on this topic this unique volume couples an overview of the practical problems faced by practitioners with a thorough review of relevant literature and research The practical Handbook format ensures it is a student friendly resource but its breadth of scope and impressive contributors means that it is also ideal for practitioners and professionals working in the field Combining the contributions of different disciplines media and journalism studies sociology and history of science the perspectives of different geographical and cultural contexts and by selecting key contributions from appropriate and well respected authors this original text provides an interdisciplinary as well as a global approach to public communication of science and technology

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the

social contexts of each. For this reason, science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses. Even so, those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The *Encyclopedia of Science and Technology Communication* presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology, and philosophy of science as well as relevant media and communication theory, principles of risk communication, new trends, and how to evaluate the effectiveness of science communication programmes. To mention just a few of the major challenges, this work will help to develop and enhance such understanding as it addresses these challenges and more. Topics covered include advocacy, policy, and research organizations; environmental and health communication; philosophy of science; media theory and science communication; informal science education; science journalism as a profession; risk communication theory; public understanding of science; pseudo science in the news; special problems in reporting science and technology; science communication ethics.

Encyclopedia of journalism. 6. Appendices Christopher H. Sterling, 2009-09-25. The six volume *Encyclopedia of Journalism* covers all significant dimensions of journalism including print, broadcast, and Internet journalism; US and international perspectives; history; technology; legal issues and court cases; ownership and economics. *Handbook on Communicating and Disseminating Behavioral Science* Melissa K. Welch-Ross, Lauren G. Fasig, 2007-10-03. The *Handbook on Communicating and Disseminating Behavioral Science* assembles for the first time in a single volume research, scholarship, and practices from across relevant disciplines and professions to give a coherent picture for both students in the classroom and scholars. Designed as both a text and a handbook, it provides insights into the main actors, contemporary themes, and approaches; key challenges and the broader conditions that influence whether and how the work occurs. Contributors include behavioral scientists, journalism and communication scholars, mass media reporters, editors, and producers from print, television, and radio; representatives of think tanks and advocacy organizations; and professional communicators from a university, a scientific society, and a national social issue campaign. All bring an accomplished record of sharing behavioral science to inform policy, mass media service, professions, and the public. Though scholarly, the book brings together leading authorities who are both doers and thinkers to offer insights into how the work is done and to illuminate the underlying conceptual and empirical issues. The book also advances the dissemination and communication of behavioral research as an area of scientific inquiry in its own right, one that holds vast opportunities for the field of behavioral science. Contributors offer recommendations for programs of research that should be at the top of the research agenda. As a book of core readings, written to be accessible to both professionals and students, the book is poised to be a staple of any serious attempt to

introduce behavioral scientists to key issues in communicating and disseminating behavioral science and to advance their capacity to understand and conduct the work It is also an unrivaled resource for student and professional science communicators seeking to learn more about the challenges of communicating behavioral research **Issues in General Science and Scientific Theory and Method: 2013 Edition** ,2013-05-01 Issues in General Science and Scientific Theory and Method 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Mixed Methods Research The editors have built Issues in General Science and Scientific Theory and Method 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Mixed Methods Research in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in General Science and Scientific Theory and Method 2013 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at [http www ScholarlyEditions com](http://www.ScholarlyEditions.com) *Science* ,1928 **Handbook of Educational Psychology** Lyn Corno,Eric M. in the MENA region while analyzing how journalists in these countries cover science and engage with scientists Most countries in the Middle East and North Africa region have set an ambitious goal for 2030 to transform their societies and become knowledge economies This means modernizing institutions and encouraging people to embrace Science Technology Engineering and Mathematics as part of their daily lives This books claims that the main vehicle to achieve this goal is science news reporting as it continues to be the main platform to disseminate scientific knowledge to the general public Simultaneously it is also poorly equipped to achieve this task Interviewing dozens of journalists the authors looked at specific areas such as the gender divide and its effects on science news reporting as well as the role of religion and culture in shaping journalism as a political institution The authors conclude that traditional normative assumptions as to why science reporting does not live up to expectations need to be reviewed in light of other more structural problems such as lack of skills and specialization in science communication in the region In so doing the book sets out to understand the past present and future of science news in one of the most challenging regions in the world for journalists

The Science-Media Interface Irene Broer,Steffen Lemke,Athanasios Mazarakis,Isabella Peters,Christian Zinke-Wehlmann,2023-10-24 The publication and distribution of scientific results is of major importance for the functioning of an information society and the tackling of the complex challenges the world faces today It is not only scholars who rely on scientific publications to advance research but also the general public which demands scientific knowledge for its forthcoming Major suppliers of scientific knowledge are the researchers themselves science communicators and science journalists each of which choose their very own approaches to selection presentation and communication of science often depending on the target group Although different in their goals and approaches digital media in particular has led to great overlaps which result in interwoven relationships equally affecting both external and internal forms of science communication This edited book describes quantifies and critically discusses the interplay between publisher and journalism driven science communication and its effect on the scholarly communication system especially on the measures of impact evaluation It is of major interest to researchers from science of science bibliometrics science communication and journalism studies

Science In Public Jane Gregory,Steven Miller,2000-09-07 Does the general public need to understand science And if so is it scientists responsibility to communicate Critics have argued that despite the huge strides made in technology we live in a scientifically illiterate society one that thinks about the world and makes important decisions without taking scientific knowledge into account But is the solution to this illiteracy to deluge the layman with scientific information Or does science news need to be focused around specific issues and organized into stories that are meaningful and relevant to people s lives In this unprecedented comprehensive look at a new field Jane Gregory and Steve Miller point the way to a more effective public understanding of science in the years ahead

Journalism: Critical Issues Allan, Stuart,2005-01-01 Over the years it has been frequently remarked that journalism is at a crossroads indeed so often that it risks sounding somewhat cliched yet there is every indication that its very forms practices

and institutions are being decisively transformed with startling implications Accordingly the principal aim of this book is to help provide the basis for new dialogues to emerge regarding journalism today as well as about where it may be heading tomorrow Journalism Critical Issues poses a series of important questions afresh questions deserving of much greater attention than they have typically received to date Each of the contributors seeks to challenge conventional ways of thinking about the critical issue at stake in their respective chapter In so doing it is their intention to further our understanding but also to encourage future explorations with the potential to revitalise journalism studies In adopting this approach it is hoped that the book will make for a lively argumentative in the best sense of the word and engaging intervention
