Nelson Goodman Daniel Cohnitz, Marcus Rossberg, 2014-12-18 Nelson Goodman s acceptance and critique of certain methods and tenets of positivism his defence of nominalism and phenomenalism his formulation of a new riddle of induction his work on notational systems and his analysis of the arts place him at the forefront of the history and development of American philosophy in the twentieth century However outside of America Goodman has been a rather neglected figure In

this first book length introduction to his work Cohnitz and Rossberg assess Goodman s lasting contribution to philosophy and show that although some of his views may be now considered unfashionable or unorthodox there is much in Goodman s work that is of significance today The book begins with the grue paradox which exemplifies Goodman s way of dealing with philosophical problems After this the unifying features of Goodman s philosophy are presented his constructivism conventionalism and relativism followed by an discussion of his central work The Structure of Appearance and its significance in the analytic tradition The following chapters present the technical apparatus that underlies his philosophy his mereology and semiotics which provides the background for discussion of Goodman s aesthetics The final chapter examines in greater depth the presuppositions underlying his philosophy

Integrative Document & Content Management

Len Asprey, Michael Middleton, 2003-01-01 Portals present unique strategic challenges in the academic environment Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution Building a portal is as much about constructing intra campus bridges as it is about user interfaces and content Designing Portals Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution s business and educational strategy by taking the reader through the processes of conceptualization design and implementation of the portals in different stages of development at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere

Semantic Search over the Web Roberto De Virgilio, Francesco Guerra, Yannis Velegrakis, 2012-08-04 The Web has become the world s largest database with search being the main tool that allows organizations and individuals to

exploit its huge amount of information Search on the Web has been traditionally based on textual and structural similarities ignoring to a large degree the semantic dimension i.e. understanding the meaning of the query and of the document content Combining search and semantics gives birth to the idea of semantic search Traditional search engines have already advertised some semantic dimensions Some of them for instance can enhance their generated result sets with documents that are semantically related to the query terms even though they may not include these terms Nevertheless the exploitation of the semantic search has not yet reached its full potential In this book Roberto De Virgilio Francesco Guerra and Yannis Velegrakis present an extensive overview of the work done in Semantic Search and other related areas They explore different technologies and solutions in depth making their collection a valuable and stimulating reading for both academic and industrial researchers The book is divided into three parts The first introduces the readers to the basic notions of the Web of Data It describes the different kinds of data that exist their topology and their storing and indexing techniques The second part is dedicated to Web Search It presents different types of search like the exploratory or the path oriented alongside methods for their efficient and effective implementation Other related topics included in this part are the use of uncertainty in query answering the exploitation of ontologies and the use of semantics in mashup design and operation The focus of the third part is on linked data and more specifically on applying ideas originating in recommender systems on linked data management and on techniques for the efficiently querying answering on linked data

Structure Howard Lasnik, Juan Uriagereka, 2022-12-13 Natural phenomena including human language are not just series of events but are organized quasi periodically sentences have structure and that structure matters Howard Lasnik and Juan Uriagereka were there when generative grammar was being developed into the Minimalist Program In this presentation of the universal aspects of human language as a cognitive phenomenon they rationally reconstruct syntactic structure In the process they touch upon structure dependency and its consequences for learnability nuanced arguments including global ones for structure presupposed in standard linguistic analyses and a formalism to capture long range correlations For practitioners the authors assess whether all we need is Merge while for outsiders they summarize what needs to be covered when attempting to have structure emerge Reconstructing the essential history of what is at stake when arguing for sentence scaffolding the authors cover a range of larger issues from the traditional computational notion of structure the strong generative capacity of a system and how far down into words it reaches to whether its variants as evident across the world's languages can arise from non generative systems While their perspective stems from Noam Chomsky's work it does so critically separating rhetoric from results They consider what they do to be empirical with the formalism being only a tool to guide their research of course they want sharp tools that can be falsified and have predictive power Reaching out to skeptics they invite potential collaborations that could arise from mutual examination of one another's work as they attempt to establish a dialogue beyond generative grammar

A Brain for Speech Francisco Aboitiz, 2017-07-12 This book discusses evolution of the human brain the origin

of speech and language It covers past and present perspectives on the contentious issue of the acquisition of the language capacity Divided into two parts this insightful work covers several characteristics of the human brain including the language specific network the size of the human brain its lateralization of functions and interhemispheric integration in particular the phonological loop Aboitiz argues that it is the phonological loop that allowed us to increase our vocal memory capacity and to generate a shared semantic space that gave rise to modern language The second part examines the neuroanatomy of the monkey brain vocal learning birds like parrots emergent evidence of vocal learning capacities in mammals mirror neurons and the ecological and social context in which speech evolved in our early ancestors This book s interdisciplinary topic will appeal to scholars of psychology neuroscience linguistics biology and history
