Sheaves, Games, and Model Completions Silvio Ghilardi, M. Zawadowski, 2013-04-17 This book is an example of fruitful interaction between non classical propositional logics and classical model theory which was made possible due to categorical logic Its main aim consists in investigating the existence of model completions for equational theories arising from propositional logics such as the theory of Heyting algebras and various kinds of theories related to propositional modal logic The existence of model completions turns out to be related to proof theoretic facts concerning interpretability of second order propositional logic into ordinary propositional logic through the so called Pitts quantifiers or bisimulation quantifiers On the other hand the book develops a large number of topics concerning the categorical structure of finitely presented algebras with related applications to propositional logics both standard like Beth's theorems and new like effectiveness of internal equivalence relations projectivity and definability of dual connectives such as difference A special emphasis is put on sheaf representation showing that much of the nice categorical structure of finitely presented algebras is in fact only a restriction of natural structure in sheaves Applications to the theory of classifying toposes are also covered yielding new examples The book has to be considered mainly as a research book reporting recent and often completely new results in the field we believe it can also be fruitfully used as a complementary book for graduate courses in categorical and algebraic logic universal algebra model theory and non classical logics 1

85th anniversary The editors would like to express the respect and sympathy they have for him His textbook The Outline of Mathematical Logic has been published in many editions and translated into several languages It was this textbook that introduced many of us into the world of mathematical logic Professor Grzegorzczuk has made fundamental contributions to logic and to philosophy His results mainly on hierarchy of primitive recursive functions known as the Grzegorzczuk hierarchy are of fundamental importance to theoretical computer science In particular they were precursory for the computational complexity theory The editors would like to stress that this special publication celebrates a scientist who is still actively pursuing genuinely innovative directions of research Quite recently Andrzej Grzegorzczuk gave a new proof of undecidability of the first order functional calculus His proof does not use the arithmetization of Kurt G del In recognition of his merits the University of Clermont Ferrand conferred to Professor Andrzej Grzegorzczuk the Doctorat Honoris Causa The work and life of Professor Andrzej Grzegorzczuk is presented in the article by Professors Stanislaw Krajewski and Jan Wolenski The papers in this collection have been submitted on invitational basis

Goguen Categories Michael Winter, 2007-08-14 Goguen categories extend the relational calculus and its categorical formalization to the fuzzy world Starting from the fundamental concepts of sets binary relations and lattices this book introduces several categorical formulations of an abstract theory of relations such as allegories Dedekind categories and related structures It is shown that neither theory is sufficiently rich to describe basic operations on fuzzy relations The book then introduces Goguen

categories and provides a comprehensive study of these structures including their representation theory and the definability of norm based operations The power of the theory is demonstrated by a comprehensive example A certain Goguen category is used to specify and to develop a fuzzy controller Based on its abstract description as well as certain desirable properties and their formal proofs a verified controller is derived without compromising the sometimes intuitive choice of norm based operations by fuzzy engineers
