Marine Proteins and Peptides Se-Kwon Kim, 2013-03-18 Food proteins and bioactive peptides play a vital role in the growth and development of the body's structural integrity and regulation as well as having a variety of other functional properties. Land animal derived food proteins such as collagen and gelatin carry risks of contamination such as BSE. Marine derived proteins which can provide equivalents to collagen and gelatin without the associated risks are becoming more popular among consumers because of their numerous health beneficial effects. Most marine derived bioactive peptides are currently underutilized. While fish and shellfish are perhaps the most obvious sources of such proteins and peptides, there is also the potential for further development of proteins and peptides from sources like algae, sea cucumber and molluscs. Marine derived proteins and peptides also have potential uses in novel products with the possibility of wide commercialization in the food, beverage, pharmaceutical and cosmetic industries as well as in other fields such as photography, textiles, leather, electronics, medicine and biotechnology. *Marine Proteins and Peptides: Biological Activities and Applications* presents an overview of the current status, future industrial perspectives and commercial trends of bioactive marine derived proteins and peptides. Many of the industrial perspectives are drawn from the food industry but the book also refers to the pharmaceutical and cosmetics industries. There have recently been significant advances in isolating functional ingredients from marine bio resources and seafood by products for use in these industries but little has been published creating a knowledge gap particularly with regard to the isolation and purification processes. This book is the first to fill that gap. *Marine Proteins and Peptides: Biological Activities and Applications* is a valuable resource for researchers in marine biochemistry field as well as food industry managers interested in exploring novel techniques and knowledge on alternative food protein sources. It will become a standard reference book for researchers involved in developing marine bio resources and seafood by products for novel nutraceutical, cosmetics and pharmaceutical applications. It will also appeal to managers and product developers in the food, pharmaceutical and cosmetics industries particularly those looking to use marine derived proteins and peptides as substitutes or replacements for unfashionable or outdated food components. **Dairy**

It also discusses biochemical reactions taking place in different dairy products and microorganisms involved in such reactions. The text provides strategies for rapid detection of pathogenic and non pathogenic. **Bioactive Peptides** Richard Owusu-Apenten, 2010-06-23 Bioactive peptides are used to enhance the body's antioxidant status, antiseptic capacity, immune function, anti-inflammatory capacity, mineral absorption and appetite. They can also mitigate major metabolic derangements arising from chronic illnesses which result in unwanted weight loss. Presenting data from human studies, clinical trials and recent research findings, this work summarizes the applications and benefits of this therapy. The book covers host response, quality factors, protein economics and muscle loss. It includes case studies on aging, AIDS, COPD, diabetes, inflammatory bowel

Physiological, Molecular, and Genetic Perspectives of Wheat Improvement Shabir H Wani,Amita Mohan,Gyanendra Pratap Singh,2020-12-17 World population is growing at an alarming rate and may exceed 9.7 billion by 2050 whereas

agricultural productivity has been negatively affected due to yield limiting factors such as biotic and abiotic stresses as a result of global climate change. Wheat is a staple crop for 20% of the world population and its yield needs to be augmented correspondingly in order to satisfy the demands of our increasing world population. Green revolution, the introduction of semi dwarf high yielding wheat varieties along with improved agronomic management practices gave rise to a substantial increase in wheat production and self sufficiency in developing countries that include Mexico, India and other south Asian countries. Since the late 1980s however wheat yield is at a standoff with little fluctuation. The current trend is thus insufficient to meet the demands of an increasing world population. Therefore while conventional breeding has had a great impact on wheat yield with climate change becoming a reality, newer molecular breeding and management tools are needed to meet the goal of improving wheat yield for the future. With the advance in our understanding of the wheat genome and more importantly the role of environmental interactions on productivity, the idea of genomic selection has been proposed to select for multi genic quantitative traits early in the breeding cycle. Accordingly genomic selection may remodel wheat breeding with gain that is predicted to be 3 to 5 times that of crossbreeding. Phenomics, high throughput phenotyping is another fairly recent advancement using contemporary sensors for wheat germplasm screening and as a selection tool. Lastly CRISPR/Cas9 ribonucleoprotein mediated genome editing technology has been successfully utilized for efficient and specific genome editing of hexaploid bread wheat. In summary there has been exciting progresses in the development of non GM wheat plants resistant to biotic and abiotic stress and or wheat with improved nutritional quality. We believe it is important to highlight these novel research accomplishments for a broader audience with the hope that our readers will ultimately adopt these powerful technologies for crops improvement in order to meet the demands of an expanding world population.
