Information increased in volume due to a series of innovations such as the electrification of communications and the development of computers but also due to the organization of facts and knowledge by discipline making it easier to manage and access. He looks at what major disciplines have done to shape the nature of modern information, devoting chapters to the most obvious ones. Cortada argues that understanding how some features of information evolved is useful for those who work in subjects that deal with their very construct and application such as computer scientists and those exploring social media and most recently history. *The Birth of Modern Facts* builds on Cortada's prior books examining how information became a central feature of modern society, most notably as a sequel to *All the Facts: A History of Information in the United States since 1870* (OUP, 2016) and *Building Blocks of Society: History, Information, Ecosystems, and Infrastructures* (R L, 2021). [American Health Quackery](#) James Harvey Young, 2014-07-14. James Harvey Young, the foremost expert on the history of medical frauds, finds quackery in the 1990s to be more extensive and insidious than in earlier and allegedly more naive eras. The modern quack isn't an outrageous-looking hawker of magic remedies operating from the back of a carnival wagon; but he knows how to use antiregulatory sentiment and ingenious promotional approaches to succeed in a trade that is both bizarre and deceitful. In *The Toadstool Millionaires* and *The Medical Messiahs*, Young traced the history of health quackery in America from its colonial roots to the late 1960s. This collection of essays discusses more recent health scams and reconsiders earlier ones. Liberally illustrated with examples of advertising for patent medicines and other alternative therapies, the book links evolving quackery to changing currents in the scientific, cultural, and governmental environment. Young describes varieties of quackery like frauds related to the teeth, nostrils, aimed at children, and cure-all gadgets with such names as Electreat, Mechanical Heart. The case of Laetrile illustrates how an alleged vitamin for controlling cancer could be ballyhooed and lobbied into a national mania, half the states passing laws giving the cyanide-containing drug some special status. And AIDS is the most recent example of an illness that tragically has panicked some of its victims and members of the general public into putting their hopes in fake cures and preventives. Young discusses the complex question of vulnerability: why people fall victim to health fraud and considers the difficulties confronting governmental regulators. From the late 1960s to the early 1990s, the annual quackery toll has escalated from two billion to over twenty-five billion dollars. Young helps us discover why. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. *The Medical Messiahs* James Harvey Young, 2015-03-08. James Harvey Young describes the development of patent medicines in America from the enactment in 1906 of the Pure Food and Drugs Act through the mid-1960s. Many predicted that the Pure Food and Drugs Act would be the end of harmful nostrums.

Poirier,2012-12-06 For more than 50 years it has been recognized that diet influences cancer formation both in humans and in experimental animals In fact early investigators successfully retarded the onset of tumors in animals by dietary manipulation Such findings led to an early optimism that cancer would prove to be yet another disease resulting from dietary imbalances and might thus be amenable to prevention or cure by appropriate nutritional changes Subsequent studies showed that the influence of diet on cancer formation was not only very complex it also did not appear to play a direct causative role in carcinogenesis Thus during the mid 1950s scientific interest in diet and cancer greatly waned By the early 1970s however a resurging interest in diet and cancer became evident This field of activity has continued to grow Yet for over 20 years no comprehensive meeting has been held to summarize the major developments concerning dietary modification of carcinogenesis over a broad range of essential nutrients To fill this void a workshop was held on the role of essential nutrients in carcinogenesis from January 30 to February 1 1985 in Bethesda Maryland under the auspices of the National Cancer Institute This volume is a compilation of the presentations made at that meeting
