**Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional and Deposition Disease** Bruce R. Smoller, Franco Rongioletti, 2010-09-28 It is a pleasure to introduce this new book Clinical and Pathological Aspects of Skin Diseases in Endocrine Metabolic Nutritional and Deposition Disease edited by two of my friends and respected colleagues Franco Rongioletti and Bruce R Smoller In fact I was very enthusiastic when I learned that they were preparing this work Although endocrine metabolic and deposition diseases are regularly included in general textbooks of dermatology and dermatopathology one gains the general impression that these topics receive little emphasis and are mainly included for completeness The prospect of having all of this information in one volume lovingly described and detailed by experts in the field should be of great interest not only to dermatologists pathologists and dermatopathologists but also to internists and endocrinologists who may well gain a different perspective on these disorders As a dermatopathologist I am also pleased that this project has been organized and undertaken

by two distinguished authorities in cutaneous pathology This assures a close integration of histology and other laboratory techniques with the clinical aspects of these disorders which will make it possible perhaps for the first time to view these conditions in a truly comprehensive way So I invite you the reader to open this volume and dig in be prepared for an eye catching intellectually stimulating and ultimately rewarding experience Charlottesville VA James W Patterson v w Foreword

Dietary and Nutritional Indices and Chronic Diseases Sorayya Kheikouri, Mohammad Alizadeh, Masayo Nakamori Rossignoli, 2024-03-06 Chronic diseases such as diabetes cardiovascular diseases and cancers are known as a substantive worldwide challenge for health systems and are major contributors to mortality and morbidity According to the World Health Organization 71% of all deaths and 63.8 % of Disability Adjusted Life Years DALYs are attributed to chronic diseases The composition of a diet influences health status and affects the occurrence and severity of chronic diseases As different components of a diet correlate and interact with one another addressing only individual dietary constituents does not usually help in analyzing the extent to which diets may prevent or contribute to the development or progress of chronic diseases In recent years the concept of dietary indices has received more attention by both researchers and clinicians and is used as a means to capture the overall effect of a diet on a specific disease or a group of related illnesses These indices are nutritionally derived mathematical algorithms which are developed on the bases of useful or detrimental nutrients and or food groups Thus the indices are frequently used to elucidate proper aspects of a specific diet such as quality diversity anti inflammatory anti oxidative and or anti glycation potential and acid load Examples include the dietary inflammatory index DII dietary total antioxidant capacity DTAC healthy eating index HEI dietary acid load and so forth There is accumulating evidence indicating a link between scores of dietary and nutritional indices and health outcomes
