Nutritional Aspects of Osteoporosis Peter Burckhardt, Bess Dawson-Hughes, Robert P. Heaney, 2012-12-06 For the third time specialists from all over the world met to present their most recent scientific results and to update their knowledge in the expanding field of nutrition and osteoporosis Major nutritional factors such as calcium and vitamin D were reexamined with special attention on the effects of calcium given either as a supplement or in dairy products in children and adolescents and to vitamin D supplementation in the elderly The RDA for calcium was questioned and the calcium requirement was redefined Special attention was paid to proteins and their growth promoting action via IGF I as well as to the profound effects on calcium and bone metabolism of vegetarian diets or diets rich in acidic or alkaline foods Although considered an environmental factor influencing the pathogenesis of osteoporosis nutrition was discussed in relation to genetic conditions because certain genetic conditions modify patients responses to nutritional deficiencies and to supplementary interventions These proceedings report the wide spectrum of research currently being undertaken and the new perspectives this presents and emphasize the significant and important impact of nutrition on bone health and disease

Nutritional Aspects of Osteoporosis Peter Burckhardt, Bess Dawson-Hughes, Robert P. Heaney, 2004-07-27 Nutritional Aspects of Osteoporosis is based on presentations given at the Fifth International Symposium on Nutritional Aspects of Osteoporosis held in Lausanne Switzerland in 2003 Although an often neglected chapter of medical research the nutritional influences on bone health was a discussed topic at this congress Also discussed were new insights into the role of proteins vitamins potassium vegetables food acid load mineral waters and calcium Based on presentations given at the Fifth International Symposium on Nutritional Aspects of Osteoporosis held in Lausanne Switzerland in 2003 Medical research the nutritional influences on bone health was covered New insights into the role of proteins vitamins potassium vegetables food acid load mineral waters and calcium Nutritional Influences on Bone Health Peter Burckhardt, Bess

Dawson-Hughes, Connie M. Weaver, 2010-06-16 The seventh symposium on Nutritional Aspects of Osteoporosis continues to be the primary forum for scientists to focus on the impact of nutrition on bone health in general Since 1991 the year of the first symposium research in this field has increased impressively and has become an established part of research and science in osteology This symposium in particular featured many global comparisons in diet and the effect on bone As Western diet permeates more of the globe and the population continues to grow it is meaningful to study the impact of these changes on bone health as diet is one of the few major modifiable factors which in turn affects health care costs Calcium vitamin D and acid base balance continued to dominate the discussion The symposium offered an opportunity to learn about theories and data in nutritional research concerning bone as well as methodological approaches to classify diets The proceedings allow the reader to capture the new messages to analyze the new scientific data presented and to use the book as a source of references in this field Peter Burckhardt Bess Dawson Hughes Connie Weaver v Acknowledgments This work comprises papers from

Nutritional Aspects of Bone Health provides an in depth review of the role of diet in the development and maintenance of bone health throughout the lifecycle and prevention of osteoporosis in later life. The book is multi authored by the world's leading researchers in this area who have come together to formulate the first ever textbook on nutritional aspects of bone health and includes the current and cutting edge science underpinning the prevention of bone disease. The book is structured such that in the first section an overview is provided on what is meant by the terms bone health and osteoporosis and includes key areas such as epidemiology, genetics and the impact of non nutritional exogenous factors influencing the skeleton. The second section details the established nutritional factors affecting bone health namely calcium and vitamin D. Section three focuses on the role of macronutrients and macrominerals in bone health namely protein, phosphorus, sodium and potassium including the criticality of acid base homeostasis to skeletal integrity. Section four addresses the effects of microminerals, trace elements, vitamin K, vitamin A and isoflavones on bone. Section five focuses attention on key issues connected with the influence of diet and anorexia and bulimia on bone health including nutrition and bone growth, nutrient gene interactions, nutrient drug interactions and the final section discusses the effect of diet on reduction of fracture risk, the cost effectiveness of nutritional supplements and nutritional strategies for prevention and treatment of osteoporosis. The book is targeted at a number of key audiences. Whilst there is a focus on the academic research world and those principally involved in education at both undergraduate and postgraduate levels, the book will also be of considerable interest to those participating in the treatment and prevention of osteoporosis namely those working in the medical and health promotion fields. Furthermore, Nutritional Aspects of Bone Health will be of particular interest to the food industry as the popularity of foods designed to target specific health issues increases and nutritional therapy has a critical role to play in this major public health problem.

Nutritional Aspects of Osteoporosis 2006 Peter Burckhardt, Robert Proulx Heaney, Bess Dawson-Hughes, 2007. The 6th Symposium on Nutritional Aspects of Osteoporosis confirmed that the field of nutritional influences on bone health has become a very active, productive and innovative scientific specialty which justifies a periodic review. Since the last meeting in 2003, new nutritional factors and aspects have been discovered, e.g. the importance of vitamin D on muscle function and risk of fall, the interactions between proteins and calcium metabolism, the importance of the homocysteine system and more information has been gathered on the role of the acid respectively the alkaline load of food on bone health. In this context, have been further examined the influence of vitamin K, of potassium and bicarbonate of fruits and vegetables, furthermore new data were produced on the long term efficacy of calcium or dairy products or of proteins consumed in childhood. This volume presents the major presentations of the symposium. It offers the opportunity to review several segments of the growing field of nutritional research.

Prevention and Management of Osteoporosis World Health Organization,2003-12-31 Bone is hard tissue that is in a constant state of flux being built up by bone forming cells called osteoblasts while also being broken down or resorbed by cells known as osteoclasts During childhood and adolescence bone formation is dominant bone length and girth increase with age ending at early adulthood when peak bone mass is attained Males generally exhibit a longer growth period resulting in bones of greater size and overall strength In males after the age of 20 bone resorption becomes predominant and bone mineral content declines about 4% per decade Females tend to maintain peak mineral content until menopause at which time it declines about 15% per decade Osteoporosis is a disease characterized by low bone mass and structural deterioration of bone tissue leading to bone fragility and an increased susceptibility to fractures especially of the hip spine and wrist Osteoporosis occurs primarily as a result of normal ageing but can arise as a result of impaired development of peak bone mass e g due to delayed puberty or undernutrition or excessive bone loss during adulthood e g due to estrogen deficiency in women undernutrition or corticosteroid use Osteoporosis induced fractures cause a great burden to society Hip fractures are the most serious as they nearly always result in hospitalization are fatal about 20% of the time and produce permanent disability about half the time Fracture rates increase rapidly with age and the lifetime risk of fracture in 50 year old women is about 40% similar to that for coronary heart disease In 1990 there were 1.7 million hip fractures alone worldwide with changes in population demographics this figure is expected to rise to 6 million by 2050 To help describe the nature and consequences of osteoporosis as well as strategies for its prevention and management a WHO Scientific Group meeting of international experts was held in Geneva which resulted in this technical report This monograph describes in detail normal bone development and the causes and risk factors for developing osteoporosis The burden of osteoporosis is characterized in terms of mortality morbidity and economic costs Methods for its prevention and treatment are discussed in detail for both pharmacological and non pharmacological approaches For each approach the strength of the scientific evidence is listed The report also provides cost analysis information for potential interventions and discusses important aspects of developing national policies to deal with osteoporosis Recommendations are made to the general population care providers health administrators and researchers Lastly national organizations and support groups are listed by country
