

Sphaleron processes

- Sphaleron processes are non-perturbative transitions in the electroweak theory that violate baryon and lepton number conservation
- They are significant in explaining the matter-antimatter asymmetry observed in the universe
- These processes occur at very high temperatures, typical in the early universe or possibly in high-energy particle collisions
- Understanding sphalerons helps in exploring the connections between particle physics and cosmology

Practical example: Particle accelerators

- Sphaleron processes are theoretical transitions in particle physics that violate certain conservation laws
- These transitions are thought to occur at very high temperatures, similar to those present in the early universe or achievable in particle accelerators
- By studying particle collisions at high energies, accelerators like the Large Hadron Collider might provide insights into these rare events, potentially helping to explain matter-antimatter asymmetry in the universe
