 D. Boantza, 2016-05-06 The seventeenth century scientific revolution and the eighteenth century chemical revolution are
 rarely considered together either in general histories of science or in more specific surveys of early modern science or
 chemistry This tendency arises from the long held view that the rise of modern physics and the emergence of modern
 chemistry comprise two distinct and unconnected episodes in the history of science Although chemistry was deeply
 transformed during and between both revolutions the scientific revolution is traditionally associated with the physical and
 mathematical sciences whereas modern chemistry is seen as the exclusive product of the chemical revolution This
 historiographical tension between similarity in form and disparity in historical content of the two events has tainted the way
 we understand the rise of modern chemistry as an integral part of the advent of modern science Against this background
 Matter and Method in the Long Chemical Revolution examines the role of and effects on chemistry of both revolutions in
 parallel using chemistry during the chemical revolution to illuminate chemistry during the scientific revolution and vice versa
 Focusing on the crises and conflicts of early modern chemistry and their retrospectively labeled losing parties the author
 traces patterns of continuity in matter theory and experimental method from Boyle to Lavoisier and reevaluates the
 disciplinary relationships between chemists mechanists and Newtonians in France England and Scotland Adopting a unique
 approach to the study of the scientific and chemical revolutions and to early modern chemical thought and practice in
 particular the author challenges the standard revolution centered history of early modern science and reinterprets the rise of
 chemistry as an independent discipline in the long eighteenth century *Comptes rendus du Congrès international de*
