Back in the Spaceship Again Karen Sands-O'Connor, Marietta Frank, 1999-08-30 Much literature for children appears in the form of series in which familiar characters appear in book after book In the late nineteenth and early twentieth century authors began to write science fiction series for children These early series generally had plots that revolved around inventions developed by the protagonist But it was the development and use of rocket and atomic science during World War II that paved the way for interesting and exciting new themes conflicts and plots While much has been written about the early juvenile science fiction series particularly the Tom Swift books comparatively little has been written about children's science fiction series published since 1945 This book provides a broad overview of this previously neglected topic The volume offers a critical look at the history themes characters settings and construction of post 1945 juvenile science fiction series including the A I Gang the Animorphs Commander Toad Danny Dunn Dragonfall Five the Magic School

Bus and Space Cat The book begins with an introductory history of juvenile science fiction since 1945 with chapters then devoted to particular topics Some of these topics include the role of aliens and animals attitudes toward humor the absence and presence of science and the characterization of women A special feature is an appendix listing the various series In addition the volume provides extensive bibliographical information **Space Travel - the Reality** E R Niles,2007-11-10 Although space travel has been a topic of great interest to many few have an understanding of the ultimate limits that will determine its possibilities One thing is certain No matter the advancement in technology whether earthling or extraterrestrial energy requirements will determine ultimate success in space travel True technology will play a part Among other things it will determine the kinds of fuels that will be useable in deep space travel and that will in the end determine its successes Are we ultimately going to be able to travel outside our own solar system to reach other worlds Have extraterrestrials really visited us in the past These are the questions addressed in this book It is written for the layman and does not require a technical background *Elementary School Aerospace Activities* ,1977 Elementary School Aerospace Activities, a Resource for Teachers ,1977 Astronautics Symposium United States. Congress. Joint Committee on Atomic Energy, 1958 *Project Deep Space* H. Preston, 2000-12 The year was 2115 For more than 150 years governments and private firms had been flying into space but they still had not reached a point at which they had established a viable space travel industry The growing public opinion was that they were spending too much money wasting too much of Earth's scarce resources and were no nearer to the routine hauling of passengers and freight than they were 150 years ago The idea of space travel beyond our planetary system had faded to a level of wild fantasy While an innovative spacecraft manufacturing company and an aggressive airline firm brought space travel to the level of a viable industry with the introduction of a propulsion system without the need to carry a fuel load The new ships were powered by electrical energy But they had a serious limitation there had to be a power station at the destination With bases on planets and satellites further and further away they gradually established a system to exploit the resources of other planets and asteroids mining and discovering new minerals This story is about the results of a discovery on one of those planets that enabled the development of a propulsion system that revolutionized space travel allowing journeys beyond the solar system
