[Sex in City Plants, Animals, Fungi, and More](#) Kenneth D. Frank, 2022-04-19 Cities pose formidable obstacles to nonhuman life Vast expanses of asphalt and concrete are inhospitable to plants and animals traffic noise and artificial light disturb natural rhythms sewage and pollutants imperil existence Yet cities teem with life In rowhouse neighborhoods tiny flowers bloom from cracks in the sidewalk White clover covers lawns its seeds dispersed by shoes and birds Moths flutter and spiders weave their webs near electric lights Sparrows and squirrels feast on the scraps people leave behind Pairs of red tailed hawks nest on window ledges How do wild plants and animals in urban areas find mates How do they navigate the patchwork of habitats to reproduce while avoiding inbreeding In what ways do built environments enable or inhibit mating This book explores the natural history of sex in urban bacteria fungi plants and nonhuman animals Kenneth D Frank illuminates the reproductive behavior of scores of species He examines topics such as breeding systems sex determination sex change sexual conflict sexual trauma sexually transmitted disease sexual mimicry sexual cannibalism aphrodisiacs and lost sex Frank offers a guide to urban reproductive diversity across a range of conditions showing how understanding of sex and mating furthers the

appreciation of biodiversity He presents reproductive diversity as elegant but vulnerable underscoring the consequences of human activity Featuring compelling photographs of a multitude of life forms in their city habitats this book provides a new lens on urban natural history

Spider Behaviour Marie Elisabeth Herberstein, 2011-01-27 Spiders are often underestimated as suitable behavioural models because of the general belief that due to their small brains their behaviour is innate and mostly invariable Challenging this assumption this fascinating book shows that rather than having a limited behavioural repertoire spiders show surprising cognitive abilities changing their behaviour to suit their situational needs The team of authors unravels the considerable intra specific as well as intra individual variability and plasticity in different behaviours ranging from foraging and web building to communication and courtship An introductory chapter on spider biology systematics and evolution provides the reader with the necessary background information to understand the discussed behaviours and helps to place them into an evolutionary context Highlighting an under explored area of behaviour this book will provide new ideas for behavioural researchers and students unfamiliar with spiders as well as a valuable resource for those already working in this intriguing field

Sperm Competition and Sexual Selection Tim R. Birkhead, Anders Pape Møller, 1998-08-12 Sperm Competition and Sexual Selection presents the intricate ways in which sperm compete to fertilize eggs and how this has prompted reinterpretations of breeding behavior This book provides a theoretical framework for the study of sperm competition which is a central part of sexual selection It also discusses the roles of females and the relationships between paternal care in sperm competition The chapters focusing on taxonomic development are diverse and cover all the major animal groups both vertebrate and invertebrate and plants The final chapter provides an overview discussing the relationship

between sperm competition and sexual selection in terms of both function and mechanism and how these translate into species fitness This book will be of prime interest to behaviorists ecologists and evolutionary biologists suggesting new avenues of research and new ways of approaching old problems The only up to date summary of a central and popular subject Well known editors and authors Provides a theoretical framework for the study of sperm competition Covers all major animal groups Includes a chapter on plants

Sexual Selection Regina H. Macedo, Glauco Machado, 2013-09-25 Sexual Selection Perspectives and Models from the Neotropics presents new sexual selection research based upon neotropical species As neotropical regions are destroyed at an alarming rate with an estimated 140 species of rainforest plants and animals going extinct every day it is important to bring neotropical research to the fore now Sexual selection occurs when the male or female of a species is attracted by certain characteristics such as form color or behavior When those features lead to a greater probability of successful mating they become more prominent in the species Although most theoretical concepts concerning sexual selection and reproductive strategies are based upon North American and European fauna the Neotropical region encompasses much more biodiversity with as many as 15 000 plant and animal species in a single acre of rain forest This book illustrates concepts in sexual selection through themes ranging from female cryptic choice in insects sexual conflict in fish interaction between sexual selection and the immune system nuptial gifts visual and acoustic sexual signaling parental investment to alternative mating strategies among others These approaches distinguish Sexual Selection from current publications in sexual selection mainly because of the latitudinal and taxonomic focus so that readers will be introduced to systems mostly unknown outside the tropics several of which bring into question some well established patterns for temperate regions Synthesizes sexual selection research on species from the Neotropics Combines different perspectives and levels of analysis using a broad taxonomic basis introducing readers to systems mostly unknown outside the tropics and bringing into question well established patterns for temperate regions Includes contributions exploring concepts and theory as well as discussions on a variety of Neotropical vertebrates and invertebrates such as insects fish arthropods and birds

Spider Biology Rainer Foelix, 2025-09-15 This book is based on the well established book Biology of Spiders but is completely updated It focuses on the biology and natural history of spiders in general it does not deal with the identification of spiders Virtually all aspects of spider biology are covered from anatomy and physiology to neurobiology and behavior or from spider venom to prey capture and from silk production to complex web construction The book will appeal not only to spider enthusiasts professional arachnologists and zoologists but to anyone with an interest in biology It is written in a clear and straightforward style making it easy to read for the general reader
