Quantization, Geometry and Noncommutative Structures in Mathematics and Physics Alexander Cardona, Pedro Morales, Hernán Ocampo, Sylvie Paycha, Andrés F. Reyes Lega, 2017-10-26 This monograph presents various ongoing approaches to the vast topic of quantization which is the process of forming a quantum mechanical system starting from a classical one and discusses their numerous fruitful interactions with mathematics The opening chapter introduces the various forms of quantization and their interactions with each other and with mathematics A first approach to quantization called deformation quantization consists of viewing the Planck constant as a small parameter This approach provides a deformation of the structure of the algebra of classical observables rather than a radical change in the nature of the observables When symmetries come into play deformation quantization needs to be merged with group actions which is presented in chapter 2 by Simone Gutt The noncommutativity arising from quantization is the main concern of noncommutative geometry Allowing for the presence of symmetries requires working with principal fiber bundles in a non commutative setup where Hopf algebras appear naturally This is the topic of chapter 3 by Christian Kassel Nichols algebras a special type of Hopf algebras are the subject of chapter 4 by Nicol s Andruskiewitsch The purely algebraic approaches given in the previous chapters do not take the geometry of space time into account For this purpose a special treatment using a more geometric point of view is required An approach to field quantization on curved space time with applications to cosmology is presented in chapter 5 in an account of the lectures of Abhay Ashtekar that brings a complementary point of view to non commutativity An alternative quantization procedure is known under the name of string theory In chapter 6 its supersymmetric version is presented Superstrings have drawn the attention of many mathematicians due to its various fruitful interactions with algebraic geometry some of which are described here The remaining chapters discuss further topics as the Batalin Vilkovisky formalism and direct products of spectral triples This volume addresses both physicists and mathematicians and serves as an introduction to ongoing research in very active areas of mathematics and physics at the border line between geometry topology algebra and quantum field theory

Allen L. Mann, Gabriel Sandu, Merlijn Sevenster, 2011-05-05 Bringing together over twenty years of research this book gives a complete overview of independence friendly logic It emphasizes the game theoretical approach to logic according to which logical concepts such as truth and falsity are best understood via the notion of semantic games The book pushes the paradigm of game theoretical semantics further than the current literature by showing how mixed strategies and equilibria can be used to analyze independence friendly formulas on finite models The book is suitable for graduate students and advanced undergraduates who have taken a course on first order logic It contains a primer of the necessary background in game theory numerous examples and full proofs **Zariski Geometries** Boris Zilber, 2010-02-04 This book presents

methods and results from the theory of Zariski structures and discusses their applications in geometry as well as various other mathematical fields Its logical approach helps us understand why algebraic geometry is so fundamental throughout mathematics and why the extension to noncommutative geometry which has been forced by recent developments in quantum physics is both natural and necessary Beginning with a crash course in model theory this book will suit not only model theorists but also readers with a more classical geometric background **The Cauchy Problem for Non-Lipschitz**

Semi-Linear Parabolic Partial Differential Equations J. C. Meyer, D. J. Needham, 2015-10-22 Reaction diffusion theory is a topic which has developed rapidly over the last thirty years particularly with regards to applications in chemistry and life sciences Of particular importance is the analysis of semi linear parabolic PDEs This monograph provides a general approach to the study of semi linear parabolic equations when the nonlinearity while failing to be Lipschitz continuous is Hölder and or upper Lipschitz continuous a scenario that is not well studied despite occurring often in models The text presents new existence uniqueness and continuous dependence results leading to global and uniformly global well posedness results in the sense of Hadamard Extensions of classical maximum minimum principles comparison theorems and derivative Schauder type estimates are developed and employed Detailed specific applications are presented in the later stages of the monograph Requiring only a solid background in real analysis this book is suitable for researchers in all areas of study involving semi linear parabolic PDEs *Groups* St Andrews 2013 C. Random Fields on the Sphere Domenico Marinucci, Giovanni Peccati, 2011-08-25 Random Fields on the Sphere presents a comprehensive analysis of isotropic spherical random fields The main emphasis is on tools from harmonic analysis beginning with the representation theory for the group of rotations $SO(3)$ Many recent developments on the method of moments and cumulants for the analysis of Gaussian subordinated fields are reviewed This background material is used to analyse spectral representations of isotropic spherical random fields and then to investigate in depth the properties of associated harmonic coefficients Properties and statistical estimation of angular power spectra and polyspectra are addressed in full The authors are strongly motivated by cosmological applications especially the analysis of cosmic microwave background CMB radiation data which has initiated a challenging new field of mathematical and statistical research Ideal for mathematicians and statisticians interested in applications to cosmology it will also interest cosmologists and mathematicians working in group representations stochastic calculus and spherical wavelets

Partial Differential Equations and Fluid Mechanics James C.
