Diamond is the record setter in many mineralogical properties such as hardness diffusivity thermal conductivity purity and covalency of bonding Similarly diamond as the premier gemstone of the mantle holds primacy for geological features such as age and depth of origin Diamond was among the first crystalline structures to be solved by X ray diffraction and the first materials measured for their Raman spectrum At more than 80 billion USD in yearly commercial value diamond sets the record for the most traded valuable mineral on the planet Despite its chemical simplicity diamond has been the object of more research effort and had more scientific and popular press pages written about it than any other mineral      Dictionary of Gems and Gemology Mohsen Manutchehr-Danai,2013-03-09 Since World War II the amount of information generated in the science of Gemology has increased tremendously Therefore this book Dictionary of Gems and Gemology was written with the aim of providing a relatively complete dictionary to assist all students hobbyists scientists and interested parties in the fields of Gems and Gemology The forerunner to this book was called Dictionary of Gems and Gemology English Persian Persian English published in Tehran Iran in 1997 It was written with the aid of more than thirty reference books relating to gemology In response to the effort required to clarify the terms within I decided to compile a book that brings all the relevant terms into one book This new book eliminates the use of different reference books and compiles nearly all the relevant terms into a one stop useful text It took twenty five years to collect the terms and the information so as to present a complete and functional lexicon The text is supported by nearly 170 illustrations and 21 tables to provide detailed and succinct information I hope and trust that this book will reach the high standard of other gemological dictionaries If you have criticisms or
