Routes To Child Language Evolutionary And Developmental Precursors:

Routes to Child Language Joanna Blake, 2000-07-03 A remarkable case study based on a detailed comparison of non human primates and human infants brings together key abilities that provide the foundation for language This link makes the case for phylogenetic continuity across species and ontogenetic continuity from infancy to childhood Examined here are the fundamental aspects of language acquisition such as vocalizations mapping of meaning on to sound use of gestures to communicate and to symbolize tool use object concept and memory This volume goes a step further to analyse the similarities and differences across species and how these influence the evolution of language The author provides evidence linking abilities associated with language acquisition and describes fascinating hypotheses about the origins of language

Outside-In □ Inside-Out Costantino Maeder, Olga Fischer, William J. Herlofsky, 2005-02-28 This fourth volume of the Iconicity series is like its predecessors devoted to the study of iconicity in language and literature in all its forms Many of the papers turn the notion of iconicity inside out some suggesting that less is more others focus on the cognitive factors inside the brain that are important for the iconic phenomena that are produced in the outside world In addition this volume includes a paper related to iconicity in music and its interaction with language Other papers range from the theoretical issues involved in the evolution of language to those that offer many inside out claims such as claiming that nouns are derived from pronouns and as such should more properly be called pro pronouns Also this volume includes perhaps the first English language analysis of the iconic aspects of sound symbolism in a prayer from the Koran This is a truly interdisciplinary collection that should turn some of the notions of iconicity in language and literature outside in and inside out **Child**

collection of articles from a very high powered set of authors based on the workshop on Current developments in non human primate gesture research which was held in July 2010 at the European University Viadrina Frankfurt Oder Germany The motivation for this book following on from the motivation for the workshop series was to present the state of the art in non human primate gesture research with a special emphasis on its history interdisciplinary perspectives developments and future directions This book provides for the first time in a single volume the most recent work on comparative gestural signaling by many of the major scholars in the field such as W D Hopkins D Leavens T Racine J van Hooff and S Wilcox in alphabetical order

Experience, Variation and Generalization Inbal Arnon, Eve V. Clark, 2011 Are all children exposed to the same linguistic input and do they follow the same route in acquisition The answer is no The language that children hear differs even within a social class or cultural setting as do the paths individual children take The linguistic signal itself is also variable both within and across speakers the same sound is different across words the same speech act can be realized with different constructions The challenge here is to explain given their diversity of experience how children arrive at similar generalizations about their first language This volume brings together studies of phonology morphology and syntax in development to present a new perspective on how experience and variation shape children's linguistic generalizations The papers deal with variation in forms learning processes and speaker features and assess the impact of variation on the mechanisms and outcomes of language learning

Gestural Communication in Nonhuman and Human Primates Katja Liebal, Cornelia Müller, Simone Pika, 2007-11-21 Research into gestures represents a multifaceted field comprising a wide range of disciplines and research topics varying methods and approaches and even different species such as humans apes and monkeys The aim of this volume originally published as a Special Issue of *Gesture* 5 1 2 2005 is to bring together the research in gestural communication in both nonhuman and human primates and to explore the potential of a comparative approach and its contribution to the question of an evolutionary scenario in which

gestures play a significant role. The topics covered include the spontaneous natural gesture use in social groups of apes and monkeys but also during interactions with humans, gestures of preverbal children and their interaction with language, speech accompanying gestures in humans as well as the use of sign language in human and nonhuman great apes. It addresses researchers with a background in Psychology, Primatology, Linguistics and Anthropology but it might also function as an introduction and a documentation state of the art for a wider, less specialised audience which is fascinated by the role gestures might have played in the evolution of human language.

The Cambridge Handbook of Linguistic Anthropology N. J. Enfield, Paul Kockelman, Jack Sidnell, 2014-09-11. The field of linguistic anthropology looks at human uniqueness and diversity through the lens of language, our species' special combination of art and instinct. Human language both shapes and is shaped by our minds, societies and cultural worlds. This state of the field survey covers a wide range of topics, approaches and theories such as the nature and function of language systems, the relationship between language and social interaction and the place of language in the social life of communities. Promoting a broad vision of the subject spanning a range of disciplines from linguistics to biology, from psychology to sociology and philosophy, this authoritative handbook is an essential reference guide for students and researchers working on language and culture across the social sciences.

The Gestural Origin of Language David F. Armstrong, Sherman E. Wilcox, 2007-04-19. In *The Gestural Origin of Language*, Sherman Wilcox and David Armstrong use evidence from and about sign languages to explore the origins of language as we know it today. According to their model, it is sign, not spoken languages, that is the original mode of human communication. The authors demonstrate that modern language is derived from practical actions and gestures that were increasingly recognized as having the potential to represent and hence to communicate. In other words, the fundamental ability that allows us to use language is our ability to use pictures or icons rather than linguistic symbols. Evidence from the human fossil record supports the authors' claim by showing that we were anatomically able to produce gestures and signs before we were able to speak fluently. Although speech evolved later as a secondary linguistic communication device that eventually replaced sign language as the primary mode of communication, speech has never entirely replaced signs and gestures. As the first comprehensive attempt to trace the origin of grammar to gesture, this volume will be an invaluable resource for students and professionals in psychology, linguistics and philosophy.

Intercorporeality Christian Meyer, Jürgen Streeck, J. Scott Jordan, 2017. Drawing together theory and advanced empirical research from a variety of disciplines, this book offers a new multidisciplinary perspective on human interaction. It conceives of the living body in terms of its interaction with other bodies and its openness to and engagement with the material and cultural world.

structures to acquaint them with the history of the discipline and to demonstrate how different sometimes competing approaches can be combined to understand language and linguistics today Written in an engaging and accessible manner this textbook is an ideal primer for new students of linguistics at any level as well as more experienced researchers seeking to understand the history of their field or the arguments and theories of other sub disciplines **Bloomsbury Companion**
