Sexual Selections Marlene Zuk, 2002-06-04 Zuk's analogies are better than anyone's pithy insightful and funny Who said feminists lack humor Zuk made me laugh with deep pleasure more than once as she reviewed the lessons of feminism for our understanding of non human animals Her main point that studying the lives of non humans should not be for the lessons they seem to provide for our political purposes but for the pleasure of knowing nature on its own terms will be compelling reading for all naturalists feminists and not feminists alike Patricia Adair Gowaty editor of *Feminism and Evolutionary Biology* Marlene Zuk uniquely combines a great breadth of knowledge about the behavior of animals with an ability to challenge conventional wisdom She also writes with a graceful style and a mischievous wit The result is a bold fresh and feminist book about how our sex lives evolved Matt Ridley author of *Genome* This is an engaging and much needed book which I hope will be widely read Sarah Blaffer Hrdy author of *Mother Nature* *Maternal Instincts* and *How They Shape the Human Species*

The Handicap Principle Amotz Zahavi, Avishag Zahavi, 1999-06-03 Ever since Darwin animal behavior has intrigued and perplexed human observers The elaborate mating rituals lavish decorative displays complex songs calls dances and many other forms of animal signaling raise fascinating questions To what degree can animals communicate within their own species and even between species What evolutionary purpose do such communications serve Perhaps most importantly what can animal signaling tell us about our own non verbal forms of communication In *The Handicap Principle* Amotz and Avishag Zahavi offer a unifying theory that brilliantly explains many previously baffling aspects of animal signaling and holds up a mirror in which ordinary human behaviors take on surprising new significance The wide ranging implications of the Zahavis new theory make it arguably the most important advance in animal behavior in decades Based on 20 years of painstaking observation the *Handicap Principle* illuminates an astonishing variety of signaling behaviors in animals ranging from ants and ameba to peacocks and gazelles Essentially the theory asserts that for animal signals to be effective they must be reliable and to be reliable they must impose a cost or handicap on the signaler When a gazelle sights a wolf for instance and jumps high into the air several times before fleeing it is signaling in a reliable way that it is in tip top condition easily able to outrun the wolf A human parallel occurs in children s games of tag where faster children will often taunt their pursuer before running By momentarily handicapping itself expending precious time and energy in this display the gazelle underscores the truthfulness of its signal Such signaling the authors suggest serves the interests of both predator and prey sparing each the exhaustion of a pointless chase Similarly the enormous cost a peacock incurs by carrying its elaborate and weighty tail feathers which interfere with food gathering reliably communicates its value as a mate able to provide for its offspring Perhaps the book s most important application of the *Handicap Principle* is to the evolutionary enigma of animal altruism The authors convincingly demonstrate that when an animal acts altruistically it handicaps itself assumes a risk or endures a sacrifice not primarily to benefit its kin or social group but to increase its own prestige within the group and thus signal its status as a partner or rival Finally the Zahavis show how many forms of non verbal communication among humans can also be explained by the *Handicap Principle* Indeed the authors suggest that non verbal signals tones of voice facial expressions body postures are quite often more reliable indicators of our intentions than is language Elegantly written exhaustively researched and consistently enlivened by equal measures of insight and example *The Handicap Principle* illuminates virtually every kind of animal communication It not only allows us to hear what animals are saying to each other and to understand why they are saying it but also to see the enormously important role non verbal behavior plays in human communication
