The Culture of Building Howard Davis, 2006-06-08 In this book of thirteen chapters Howard Davis uses historical contemporary and cross cultural examples to describe the nature and influence of these cultures He shows how building cultures reflect the general cultures in which they exist how they have changed over history how they affect the form of buildings and cities and how present building cultures which are responsible for the contemporary everyday environments may be improved Jacket

French Gothic Architecture of the Twelfth and Thirteenth Centuries Jean Bony, 2023-11-15 Gothic architecture is the most visible and striking product of medieval European civilization Jean Bony whose reputation as a medievalist is worldwide presents its development as an adventure of the imagination allied with radical technical advances the result of a continuing quest for new ways of handling space and light as well as experimenting with the mechanics of stone construction He shows how the new architecture came unexpectedly to be invented in the Paris region around 1140 and follows its history in the great cathedrals of northern France and dozens of other key buildings to the end of the thirteenth century when profound changes occurred in the whole fabric of medieval civilization Rich illustrations including comprehensive maps enhance the text and themselves constitute an exceptionally valuable documentation Despite its evident scholarly intention this book is not meant for

specialists alone but is conceived as a progressive infiltration into the complexities of history at work revealing its unpredictable vitality to the uninitiated curious mind Masons, Tricksters and Cartographers David Turnbull,2003-09-02 In an eclectic and highly original study Turnbull brings together traditions as diverse as cathedral building Micronesian navigation cartography and turbulence research He argues that all our differing ways of producing knowledge including science are messy spatial and local Every culture has its own ways of assembling local knowledge thereby creating space through the linking of people practices and places The spaces we inhabit and assemblages we work with are not as homogenous and coherent as our modernist perspectives have led us to believe rather they are complex and heterogeneous motleys *The General Assemblies and Lodges of Medieval Masons* Albert Gallatin Mackey,William R. Singleton,2005-12-01 This scarce antiquarian book is a facsimile reprint of the original Due to its age it may contain imperfections such as marks notations marginalia and flawed pages Because we believe this work is culturally important we have made it available as part of our commitment for protecting preserving and promoting the world s literature in affordable high quality modern editions that are true to the original work **Secret Societies** Michael Howard,2007-12-05 An overview of how esoteric brotherhoods have shaped history Examines the secret chronology and clandestine causes of seminal world events Shows how secret societies feed into one another and how they have worked together For thousands of years secret societies guardians of ancient esoteric wisdom have exercised a strong and often crucial influence on the destiny of nations Though largely ignored by orthodox historians the Freemasons Knights Templar and Rosicrucians affected the course of the French and American Revolutions as well as the overthrow of the medieval feudal order Inevitably the true ideals and esoteric practices of these societies have at times been perverted by self serving individuals The Nazis and the Bolsheviks British security forces the founding fathers of America and the Vatican have all justified their actions for good or for ill by claiming the mystic ideals of secret societies Michael Howard explores these connections tracing their effects in politics and statecraft from the time of ancient Egypt up to the present He sheds light on the influence of secret societies on governments and in the lives of many well known figures including Frederick the Great John Dee Francis Bacon Benjamin Franklin Comte de Cagliostro Helena Blavatsky Rasputin and Woodrow Wilson He contends that the recent formation of the European Union was directed by an umbrella group of secret societies and reveals that though secret societies have been persecuted throughout history they have survived and continue to operate powerfully in world affairs today *Medieval Masons and Gothic Architecture* Therese Helene Pallotta,1971 Victorian Occultism and the Making of Modern Magic A. Butler,2011-01-05 The late Victorian period witnessed the remarkable revival of magical practice and belief Butler examines the individuals institutions and literature associated with this revival and demonstrates how Victorian occultism provided an alternative to the tightening camps of science and religion in a social environment that nurtured magical beliefs The History of Freemasonry Albert Gallatin Mackey,1905 **Stereotomy** José Calvo-López,2020-08-08 This book deals with the

general concepts in stereotomy and its connection with descriptive geometry the social background of its practitioners and theoreticians the general methods and tools of this technology and the specific procedures for the members built in hewn stone including arches squinches stairs and vaults ending with a chapter discussing the open problems in this field Thus it can be used as a reference book in the subject but it can also read as a compelling narrative on this subject one of the main branches of pre industrial technology Construction in hewn stone requires the use of geometrical methods and tools to assure that individual stones either blocks or voussoirs fit with one another and conform to the general shape of walls arches or vaults During the Late Middle Ages and the Renaissance such techniques and instruments were developed empirically by masons and architects Later on learned mathematicians and engineers introduced refinements in these procedures and this branch of knowledge known as stereotomy furnished much material to descriptive geometry a science born with the French Revolution which provided the foundation for projective geometry **The Art of Masonry in Britain** William Diack,1904

From Single Sign to Pseudo-Script Ben Haring,2018-01-03 Writing is not the only notation system used in literate societies Some visual communication systems are very similar to writing but work differently Identity marks are typical examples of such systems and this book presents a particularly well documented marking system used in Pharaonic Egypt as an exemplary case From Single Sign to Pseudo Script is the first book to fully discuss the nature and development of an ancient marking system its historical background and the fascinating story of its decipherment Chapters on similar systems in other cultures and on semiotic theory help to distinguish between unique and universal features Written by Egyptologist Ben Haring the book addresses scholars interested in marking systems writing literacy and the semiotics of visual communication With this publication the author exemplified how a close familiarity with a subject enables research in areas of Egyptian society that had not been touched until now and how the resulting insight is presented properly Eva Maria Engel Humboldt Universit t zu Berlin in Bibliotheca Orientalis 76 1 2 2019 This work should certainly become a guidebook to scholars wishing to publish ostraca of this sort who have in the past shied away from the complex task due to the enigmatic nature of the materials The time has arrived for this study of this hitherto neglected facet of Egyptian writing to find its fitting place in the history of literacy and script in Ancient Egypt as well as in the history of workmen s signs in general Orly Goldwasser The Hebrew University of Jerusalem in Journal of Near Eastern Studies 2019 78 2 The technical data and Egyptological scholarship of the book are deliberately made very accessible to be of assistance in the understanding of identity marks in other periods and cultures This is a remarkable work of social history George J Brooke in Journal for the Study of the Old Testament 43 5 2019 *Craft Theory and Contemporary Architecture* Grant Alford,2025-05-28 This book offers a comprehensive exploration of craft theory in relation to contemporary architecture Craft is an old and familiar idea but the line between craft and art or craft and mere manufacturing for example is notoriously hard to describe In architecture a similarly blurred line between the design process on one hand and the physical making of buildings on the

other lies at the center of various debates about what it means to do architecture The growth and development of craft theory in recent years suggest new insights into these architectural debates but situating the meaning of craft within architecture within today's technological landscape is a complex problem Alford responds to this challenge by collecting various narratives from craft theory and other fields and discerning among them new lenses through which to view contemporary architectural practice Episodes from this expanded view of craft in architecture go beyond predictable accounts of Ruskin and Morris to envision new models of practice new ways of engaging other building professionals and new ways for architects to understand their own labor and the nature of how and what kinds of things they themselves craft Architecture is changing and within the ongoing story of craft explored in this book are new and surprising ways to understand design and construct the built environment Written for students and scholars this book challenges and extends the legacy of craft thinking in architecture

The Freemasons' Magazine and Masonic Mirror, 1870 **The Granite Men** Jim Fiddes, 2019-04-02 Granite is the most unyielding of building materials The great granite quarries of the North East are silent now as are virtually all of the 100 granite yards that existed in Aberdeen around the year 1900 Yet in its time the granite industry of north east Scotland was the engine that built civilisations As early as the sixteenth century granite from Aberdeen and its vicinities was building castles In the heyday of the mid nineteenth century the granite men of the North East hewed this material from the bowels of the earth and used it to fashion the iconic structures that defined the age It paved the streets and embankments of London It was used to build bridges over the Thames It was carved into monuments for kings and commoners not only in Britain but all over the world None of it possible without the men that toiled in those quarries and yards This is the story of those granite men and their industry

The Symbol at Your Door Nigel Hiscock, 2016-12-05 Is the display of number and geometry in medieval religious architecture evidence of intended symbolism This book offers a new perspective in the retrieval of meaning from architecture in the Greek East and the Latin West and challenges the view that geometry was merely an outcome of practical procedures by masons Instead it attributes intellectual meaning to it as understood by Christian Platonist thought and provides compelling evidence that the symbolism was often intended In so doing the book serves as a companion volume to *The Wise Master Builder* by the same author which found the same system implicit in plans of cathedrals and abbeys The present book explains how the architectural symbolism proposed could have been understood at the time as supported by medieval texts and its context since it is context that can confer specific meaning The introduction locates the study in its critical context and summarizes Christian Platonism as it determined the meaning of number and geometry The investigation opens with the recurrent symbolism of the dome and the cube as heaven and earth in the Byzantine world and moves to the duality of the temple and the body in the East and West as reflections of Plato's universal macrocosm and human microcosm The study then examines each of the figures of Platonic geometry in the architecture of the West against the background of their mathematics and metaphysics before proceeding to

their synthesis with the circle as seen in circular and polygonal structures the divisions of circles in Christian art and their display in window tracery culminating in the rose window In view of the multivalency of the symbolism the investigation establishes systematic occurrences of it which strongly suggest patterns of thought underlying systems of design The book concludes with a series of test cases which show the after life of the same symbolism as it overlapped with the Renaissance
