Cognition in Human Motivation and Learning Joseph Nuttin, 1981 First Published in 1982 Routledge is an imprint of Taylor Francis an informa company Community Development Bulletin , 1961 Praise, Motivation and the Child Gill Robins, 2012-07-26 Anyone who spends time with children knows that praise works It is a powerful motivator praising children for good behaviour or good work builds self esteem and self confidence Children love to collect stickers certificates and rewards so what better way is there to shape behaviour encourage good work habits and produce confident learners Teachers and parents alike know that praise is effective we use it every day and we see the positive effect that it has on our children However constructivist practitioners would argue that praise in any form creates hierarchies and competition in the classroom has little effect on genuine learning and is invasively judgemental rather than supportive Constructivists would further argue that self esteem cannot be built by external agency teachers and parents can only create an appropriate environment in which a robust sense of self can grow and develop This book challenges traditional embedded thinking about the role of praise It questions the assumptions we make about developing self esteem about the ability of children to form their own independent judgements and the choices that children make regardless rather than because of contingent praise What happens when children are praised Read this book listen to what children really think and challenge your own assumptions Features include Case studies and children s work samples Points for reflection which could be used for CPD sessions Appendices containing behaviour policy samples Pupil teacher and parental perspectives This book is aimed at

practising and training Primary school teachers It would also be suitable for NQTs who are starting to shape their own practice experienced teachers who want to develop and question their own practice and students on BA Hons and PGCE courses

Mainstream psychology emanated from European American and Judeo Christian philosophical and scientific traditions The application of this viewpoint which embeds colonial and imperialist concepts is less relevant to Asian and other indigenous cultures Although it has been accepted by non Western scholars in an attempt to emulate Western scientific practice the mainstream viewpoint is in a process of transformation to accommodate geographically relevant perspectives In this light *Foundations of Chinese Psychology* bridges the gap between western and eastern traditions and elaborates on theories based on local phenomena findings and experiences by research methods that are contextually appropriate Using a guiding principle of cultural psychology one mind many mentalities this book advocates the balancing of a global psychology concept without sacrificing that of a specific locality and people It analyzes the basics of Confucianism and compares them to Western ethical thinking arriving at a series of theories concerning social exchange face achievement motivation organizational behaviors and conflict resolution Beyond the specifics of a particular culture this book exemplifies the act of constructing autonomous social science that may be emulated in other non Western settings It also serves as an excellent guide for cross cultural research as well as a caveat on the limitations of presumptive individualism and exclusionary perspectives
