

The background of the cover is a photograph of a complex industrial chemical plant. It features numerous large, vertical stainless steel storage tanks, a network of horizontal and vertical pipes, and various valves and fittings. The scene is illuminated by warm, yellowish lights, possibly from the plant's own systems or external lighting, creating a sense of a busy, operational facility. The overall color palette is dominated by the metallic silver of the equipment and the warm tones of the lighting.

Khanna's Outlines of CHEMICAL & PETROLEUM ENGINEERING Vikas Mahto, Alapati Suryanarayana, This book of chemical Petroleum Engineering Contains of Various Topics It covers different type of question with their Answers and Fill in the Blanks Required data and equations are given for day to day calculations of Chemical Engineering topics This book is necessary tool or an instrument for Chemical Petroleum Engineers *Engineering Thermofluids* Mahmoud Massoud, 2005-09-16 Thermofluids while a relatively modern term is applied to the well established field of thermal sciences which is comprised of various intertwined disciplines Thus mass momentum and heat transfer constitute the fundamentals of thermofluids This book discusses thermofluids in the context of thermodynamics single and two phase flow as well as heat transfer associated with single and two phase flows Traditionally the field of thermal sciences is taught in universities by requiring students to study engineering thermodynamics fluid mechanics and heat transfer in that order In graduate school these topics are discussed at more advanced levels In recent years however there have been attempts to integrate these topics through a unified approach This approach makes sense as thermal design of widely varied systems ranging from hair dryers to semiconductor chips to jet engines to nuclear power plants is based on the conservation equations of mass momentum angular momentum energy and the second law of thermodynamics While integrating these topics has recently gained popularity it is hardly a new approach For example Bird Stewart and Lightfoot in Transport Phenomena Rohsenow and Choi in Heat Mass

and Momentum Transfer El Wakil in Nuclear Heat Transport and Todreas and Kazimi in Nuclear Systems have pursued a similar approach These books however have been designed for advanced graduate level courses More recently undergraduate books using an integral approach are appearing
